

Product End of Life Notice

1 Azoteq Product End-of-Life Policy

Azoteq appreciates that our customers often have long product life cycles. As Azoteq values our customers' needs, we try to keep older products in production for as long as possible. There are however situation when product obsolescence cannot be avoided.

When Azoteq determines to make a product obsolete or End of Life (EOL) the only formal notification to be provided will be this End Of Life Notice, indicating the affected products and time periods that may be applicable. The notice will be distributed to selected customers, official distributors, representatives and will be made available on the Azoteq website (www.azoteq.com).

Azoteq aims to make available and identify replacement or alternative products in the EOL notifications when at all possible.

When an EOL notice has been given the typical time period for customers to place final orders is six months from the date of customer EOL notification*. During this period Azoteq will initiate production based only on orders received. Orders accepted during this period may be subject to specific MOQ and lead time as relating to the product. Azoteq will allow an additional six months for final orders to be delivered from stock after the initial 6 month period. This provides a 12 month window from EOL notification until final delivery of product*. Any remaining stock sold after this period will be sold "as-is" with no warranty. The time periods indicated by the EOL Product List below must be considered as the dates applicable to each individual product. This may vary from the above due to circumstances surrounding a specific product.

Azoteq allows customers to request reservations for the final stock quantity that may be available in the warehouses after the final production run. The reservation requests will be assigned on a first come, first serve basis and must be confirmed by a formal order within 7 days of being notified of a successful stock reservation request.

Note: *Products classified as tools and evaluation kits are normally not critical to customer's production processes and therefore may have shorter notification periods than indicated above.
