

DUO-TOUCH SG Two-Hand Control Modules Discontinuation

Banner Engineering is issuing notification that the AT GM 13A and AT HM 13A DUO TOUCH® SG Two-Hand Control Modules will be discontinued on or around December 31, 2021. These products have been impacted by a sudden end-of-life component situation from one of our supplier and after evaluation, Banner has concluded that we will not redesign these legacy modules with alternative components.

Based upon current on-hand inventory and historical sales volume, we estimate that we will no longer produce the e model near the end of the 2021 calendar year.

The [SC10-2roe \(806222\)](#) or the [AT-FM-10K \(60698\)](#) should be considered as alternatives for two-hand control applications.

Please notify your customers who use these products with this information and work with your Regional sales and technical application contacts for all your Safety needs and opportunities.

Thank you!
