## IMPORTANT INFORMATION/DISCLAIMER

All product specifications, statements, information and data (collectively, the "Information") in this datasheet or made available on the website are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KYOCERA AVX's knowledge of typical operating conditions for such applications, but are not intended to constitute and KYOCERA AVX specifically disclaims any warranty concerning suitability for a specific customer application or use.

**ANY USE OF PRODUCT OUTSIDE OF SPECIFICATIONS OR ANY STORAGE OR INSTALLATION INCONSISTENT WITH PRODUCT GUIDANCE VOIDS ANY WARRANTY.**

The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KYOCERA AVX with reference to the use of KYOCERA AVX's products is given without regard, and KYOCERA AVX assumes no obligation or liability for the advice given or results obtained.

Although KYOCERA AVX designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Unless specifically agreed to in writing, KYOCERA AVX has not tested or certified its products, services or deliverables for use in high risk applications including medical life support, medical device, direct physical patient contact, water treatment, nuclear facilities, weapon systems, mass and air transportation control, flammable environments, or any other potentially life critical uses. Customer understands and agrees that KYOCERA AVX makes no assurances that the products, services or deliverables are suitable for any high-risk uses. Under no circumstances does KYOCERA AVX warrant or guarantee suitability for any customer design or manufacturing process.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.

# Introduction – Application Specific MLCs

## Problem Solving at the Leading Edge

As the world's leading manufacturer and innovator in application specific multilayer ceramic (ASMLC) capacitors, KYOCERA AVX offers a unique technological and production capability to the field. KYOCERA AVX actively pursues and satisfies the high reliability and custom needs of a variety of governmental and industrial customers. Successful involvement in missile programs, extensive work in ultra-high reliability telecommunications and sophisticated capacitor design applications – all have established KYOCERA AVX as the source for advanced and high reliability ASMLC capacitors.

**KYOCERA AVX Advanced Products are ISO9001 certified organizations for design and manufacturing of MLC capacitors.**

KYOCERA AVX Advanced Application Capacitors are organized around three distinct functions:

- Application Specific Development Laboratories
- Advanced Manufacturing Facilities
- Quality Control

**For designs or applications not listed please consult KYOCERA AVX Advanced Products.**

# Application Specific MLCs

## Problem Solving at the Leading Edge

### APPLICATION SPECIFIC DEVELOPMENT LABORATORIES

Initially, KYOCERA AVX technical personnel communicate with customers to learn the requirements that the new capacitor must satisfy. The personnel involved are well-versed in material, manufacturing and electronic application technologies. They study the overall application and the environment in which the part will function. Programs are begun for selection of appropriate ceramic formulations, metal systems and designs. These programs yield a detailed technology profile from which mechanical design and process specifications follow.

### ADVANCED MANUFACTURING FACILITIES

The ability and reputation of KYOCERA AVX in high reliability MLCs is due in part to the company's complete control over all phases of the production process. This includes powder processing, tape casting and/or wet build-up, green MLC assembly and final capacitor assembly/packaging. Recent renovations at KYOCERA AVX have upgraded green MLC assembly areas to certified clean room levels.

A favorite feature with many customers of KYOCERA AVX is our ability to work with customers in solving special packaging requirements. This includes special lead configurations and multiple chip packaging that simplifies the mounting of specialty capacitors.

To the customer, the total capability of KYOCERA AVX assures a high level of consistent control at all steps of production.

### QUALITY CONTROL

The Q. A. organization is an integral part of manufacturing. Quality Control tests the product of each manufacturing process, detects flaws or variations from the narrow acceptable standard and isolates the cause of the deviation. Corrective action can then be taken to return the process to within its predetermined control levels.

Quality Assurance has large and well-equipped laboratories where statistical samples are evaluated and tested to determine failure rates, characterize products and assure compliance with specification. Both destructive and non-destructive testing are used, including advanced ultrasonic inspection equipment for non-destructive inspection of an entire production quantity.

Put the experience, technology and facilities of the leading company in multilayer ceramics to work for you. No other source offers the unique combination of capability and commitment to advanced application specific components.

# SMPS Capacitors

## SMPS Capacitor Applications

### FOREWORD

High speed switch mode power supplies place high demands on the capacitors used in the input or output filters of Resonant DC-DC or Pulse Modulated DC-DC converters. KYOCERA AVX has developed several multilayer ceramic (MLC) capacitor styles for these switcher applications. These capacitors have been extensively tested and characterized and found to have almost ideal performances to meet the stringent requirements of these applications.

### Input Filter Capacitor

The Input Filter capacitor is required to perform two functions: To supply an unrestricted burst of current to the power supply switch circuitry and to not only do it without generating any noise, but to help suppress noise generated in the switch circuitry. It is, in effect, a very large decoupling capacitor. It must have very low ESL, capabilities for very high dv/dt, as well as di/dt and it must have a very low ESR to eliminate power loss.

The distance from the primary DC source, as well as the type of capacitor used in this source (usually electrolytics), presents a very high inductance to the input of the Switcher. The MLC input capacitor, with its excellent ESL and ESR characteristics, is located physically close to the switch circuitry. Repetitive peak currents, inherent with the Switcher design, require a high ripple capability, as well as high surge capability for transients, both induced and conducted from other sources. MLCs have both these capabilities.

### Output Filter Capacitor

The output from the switching circuit of a Switcher consists of current on and off. From an elevated DC reference, this current is an AC ripple additive on the DC. In order to smooth this ripple effect, a filter circuit (usually inductive input) is built to allow a storage of energy to take place during the rising ripple portion and to allow a discharge of energy during the falling ripple portion.

The ESR and ESL of the capacitor contribute to the net ripple effect. The output filter capacitor is chosen for ESR, and with previous types of capacitors, multiples were used in an attempt to lower the net ESR. The MLC offers ESRs well below the minimum allowable to lower noise levels, thus eliminating the need for multiple units.

### Other MLC Capacitors for SMPS Applications

KYOCERA AVX also manufactures coupling, decoupling, resonant and snubber capacitors for SMPS applications. Contact KYOCERA AVX for Application Specific S.M.P.S. capacitor requirements.

## Capacitor Performance

### AC Ripple Capability

Due to the wide range of product offering in this catalog, the AC ripple capabilities for switch mode power supply capacitors and high voltage capacitors are provided in the form of IBM compatible software package called SpiCalci. It is available free from KYOCERA AVX and can be downloaded for free from KYOCERA AVX website: <http://www.kyocera-avx.com/download/software/SpiCalci-AVX.zip>.

### Examples of Product Performance

SpiCalci program will provide answers to most of the design engineers' questions on critical parameters for their specific applications:

- Equivalent Series Resistance
  - function of frequency and temperature
- Equivalent Series Inductance
  - function of design
- Self Resonant Frequency
 
$$f = 1 / (2 \times \pi \sqrt{L \times C})$$
- Thermal Characteristics
  - function of design
- AC Ripple Capabilities
  - function of frequency, temperature and design

## Application Information on SupraCap®

### SUPRACAP® - LARGE CAPACITANCE VALUE MLCS

High speed switch mode power supplies require extremely low equivalent series resistance (ESR) and equivalent series inductance (ESL) capacitors for input and output filtering. These requirements are beyond the practical limits of electrolytic capacitors, both aluminum and tantalums, but are readily met by multilayer ceramic (MLCs) capacitors (Figure 1).

Theoretical SMPS's output filter capacitor values are in the range of 6-10  $\mu\text{F}/\text{amp}$  at 40KHz and drop to less than 1  $\mu\text{F}/\text{amp}$  at 1MHz. Most electrolytic applications use 10 to 100 times the theoretical value in order to obtain lower ESR from paralleling many capacitors. This is not necessary with SupraCap® MLC capacitors which inherently have ESRs in the range of milliohms. These extremely low values of ESR mean low ripple voltage and less self-heating of the capacitor.

Figure 1

Output noise spikes are reduced by lowering the filter capacitance self-inductance. The ripple current is a triangle wave form with constant  $\text{di}/\text{dt}$  except when it changes polarity, then the  $\text{di}/\text{dt}$  is very high. The noise voltage generated by the filter capacitor is

$$V_{\text{Noise}} = L_{\text{Capacitor}} \frac{\text{di}}{\text{dt}}$$

SupraCap® devices have inductance value less than 3nH.

Figure 2 compares a 5.6  $\mu\text{F}$  MLC to a 5.6  $\mu\text{F}$  tantalum which was specially designed for low ESR and ESL. When subjected to a  $\text{di}/\text{dt}$  of 200 mA/ns the tantalum shows an ESR of 165 m $\Omega$  and an ESL of 18nH versus the MLC's 4 m $\Omega$  and 0.3 nH. These performance differences allow considerable reduction in size and weight of the filter capacitor.

Additionally, MLCs are compatible with surface mount technology reflow and assembly techniques which is the desirable assembly for conversion frequencies exceeding 1 MHz. Electrolytic capacitors (both aluminum and tantalum) are not compatible with normal vapor phase (VPS) or infrared (IR) reflow temperatures (205-215°C) due to electrolyte and structural problems. SupraCap® devices are supplied with lead frames for either thru-hole or surface mount assembly. The lead frames act as stress relief for differences in coefficients of expansion between the large ceramic chip (10 ppm/ $^{\circ}\text{C}$ ) and the PC boards.

Figure 2

# SMPS Stacked MLC Capacitors

## SM Style Stacked MLC Capacitors

KYOCERA AVX is the original inventor of large capacitance value, stacked MLCC capacitors constructed with DIP leads. The SM-style, Switch Mode Power Supply (SMPS) capacitors were introduced by KYOCERA AVX in 1980s. These capacitors are the closest to the ideal electrical energy storage devices due to high CV product and extremely low ESR and ESL.

In addition to traditionally offered COG (Class I) and X7R (Class II) type dielectrics, KYOCERA AVX introduces another class I, temperature compensated N1500 dielectric characterized with very low dissipation factor. Thanks to considerably higher relative dielectric constant of N1500 dielectric, the CV product is more than doubled in comparison to ultra-stable COG dielectric, resulting in a significant reduction in the size of capacitor and a significant improvement of volumetric efficiency.

The typical applications for different type dielectrics are:

- COG: High frequency resonant capacitors, avionic AC line filters (400Hz to 800Hz), snubbers, timing circuits, high current repetitive discharge
- N1500: Avionic AC line filters (400Hz to 800Hz), snubbers, high current repetitive discharge, capacitive temperature compensation
- X7R: General filtering, input and output filters in DC/DC converters, bulk filters, DC link capacitors, motor drive filters, high current non-repetitive discharge

**Not RoHS Compliant**

## GENERAL SPECIFICATIONS FOR ALL DIELECTRIC TYPES

### Operating Temperature Range

-55° to +125°C

### Voltage Ratings

50VDC through 500VDC (+125°C)

### Dielectric Withstanding Voltage

250% rated voltage for 5 seconds with 30 to 50mA charging current (500 Volt units @ 750VDC)

### Insulation Resistance (25°C, rated DC voltage)

100KΩ min. or 1000MΩ·µF min. whichever is less

### Insulation Resistance (125°C, rated DC voltage)

10KΩ min. or 100MΩ·µF min. whichever is less

### Thermal Shock Capabilities

5 cycles (-55°C to +125°C)

### Life Test Capabilities (1000 hours)

200% rated voltage at +125°C (500 Volt units @ 600VDC)

## GENERAL SPECIFICATIONS FOR ALL DIELECTRIC TYPES

### COG Dielectric

#### Capacitance Range

0.01µF to 15µF  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

#### Capacitance Tolerances

±5%, ±10%, ±20%

#### Temperature Characteristic

0 ± 30 ppm/°C

#### Dissipation Factor

0.15% max.  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

### N1500

#### Capacitance Range

0.018µF to 33µF  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

#### Capacitance Tolerances

±5%, ±10%, ±20%

#### Temperature Characteristic

-1500 ± 250 ppm/°C

#### Dissipation Factor

0.15% max.  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

### X7R Dielectric

#### Capacitance Range

0.1µF to 390µF  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

#### Capacitance Tolerances

±10%, ±20%, +80%, -20%

#### Temperature Characteristic

±15%

#### Dissipation Factor

2.5% max.  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

# SMPS Stacked MLC Capacitors

## SM Style SM Military Styles MIL-PRF-49470

### KYOCERA AVX IS QUALIFIED TO MIL-PRF-49470/1 AND MIL-PRF-49470/2

The SMPS capacitors are designed for high current, high-power and high-temperature applications. These capacitors have very low ESR (Equivalent Series Resistance) and ESL (Equivalent Series Inductance). SMPS Series capacitors offer design and component engineers a proven technology specifically designed for programs requiring high reliability performance in harsh environments.

MIL-PRF-49470 SMPS Series capacitors are primarily used in input/output filters of high-power and high-voltage power supplies as well as in bus filters and DC snubbers for high power inverters and other high-current applications. These capacitors are available with through-hole and surface mount leads. The operating temperature is -55°C to +125°C.

The MIL-PRF-49470 capacitors are preferred over the DSCC drawing 87106 capacitors. MIL-PRF-49470 specification was created to produce a robust replacement for DSCC 87106. MIL-PRF-49470 offers two product levels.

Level "B" is the standard reliability. Level "T" is the high reliability suitable for space application.

KYOCERA AVX is qualified to supply MIL-PRF-49470/1 parts. These are unencapsulated ceramic dielectric, switch mode power supply capacitors. KYOCERA AVX is also qualified to supply MIL-PRF-49470/2 parts. These are encapsulated ceramic dielectric, switch mode power supply capacitors.

### HOW TO ORDER

M49470	R	01	474	K	C	N
						
Performance specification indicating MIL-PRF-49470	P = BP Q = BQ R = BR X = BX	Characteristic	Performance specification sheet number	01 – indicating MIL-PRF-49470/1 02 – indicating MIL-PRF-49470/2	Capacitance	Capacitance Tolerance
				BP: J = ±5% K = ±10% BX, BR & BQ: K = ±10% M = ±20%	Rated Voltage	Configuration (Lead Style)
					Z = 25V A = 50V B = 100V C = 200V E = 500V	See chart for Lead configurations

For "T" level parts, replace the "M" in the pin with "T" (for example M49470R01474KCN becomes T49470R01474KCN) MIL-PRF-49470 contains additional capacitors that are not available in 87106, such as additional lead configurations and lower profile parts.

On the pages to follow is the general dimensional outline along with a cross reference from 87106 parts to MIL-PRF-49470 parts.

### LEAD CONFIGURATION

millimeters (inches)

Symbol (Last digit of military PN, 12th digit of PN)	Lead Style	Height Profile (Dimension A)	Formed lead length, L
N	N (straight)	Standard	N/A
L	L (formed)	Standard	1.78 ± 0.25 (0.070 ± 0.010)
M	L (formed)	Standard	1.14 ± 0.25 (0.045 ± 0.010)
J	J (formed)	Standard	1.78 ± 0.25 (0.070 ± 0.010)
K	J (formed)	Standard	1.14 ± 0.25 (0.045 ± 0.010)
A	N (straight)	Low	N/A
B	L (formed)	Low	1.78 ± 0.25 (0.070 ± 0.010)
D	L (formed)	Low	1.14 ± 0.25 (0.045 ± 0.010)
C	J (formed)	Low	1.78 ± 0.25 (0.070 ± 0.010)
F	J (formed)	Low	1.14 ± 0.25 (0.045 ± 0.010)

Note: Lead options available marked with a “-” as a place holder. See lead configuration column for available lead options to replace the “-”.

Performance of SMPS capacitors can be simulated by downloading SpiCalci software program -

## SM Style SM Military Styles MIL-PRF-49470/1

### MIL-PRF-49470/1

MIL-PRF-49470/1 - capacitor, fixed, ceramic dielectric, switch mode power supply (general purpose and temperature stable), standard reliability and high reliability unencapsulated, Style PS01.

**LEAD STYLE N AND A**

**LEAD STYLE J AND C**

**CIRCUIT DIAGRAM**

**LEAD STYLE L AND B**

### DIMENSIONS:

millimeters (inches)

Case Code	$C \pm 0.635 (\pm 0.025)$	D		E (max.)	Number of Leads per side
		Min.	Max.		
1	11.4 (0.450)	49.5 (1.950)	52.7 (2.075)	12.7 (0.500)	20
2	20.3 (0.800)	36.8 (1.450)	40.0 (1.535)	22.1 (0.870)	15
3	11.4 (0.450)	24.1 (0.950)	27.3 (1.075)	12.7 (0.500)	10
4	10.2 (0.400)	8.89 (0.350)	10.8 (0.425)	11.2 (0.440)	4
5	6.35 (0.250)	6.20 (0.224)	6.97 (0.275)	7.62 (0.300)	3
6	31.8 (1.250)	49.5 (1.950)	52.7 (2.075)	34.3 (1.350)	20

### NOTES:

- Dimensions are in millimeters (inches)
- Unless otherwise specified, tolerances are 0.254 ( $\pm 0.010$ ).
- Lead frame configuration is shown as typical above the seating plane.
- See table I of MIL-PRF-49470/1 for specific maximum A dimension. For maximum B dimension, add 1.65 (0.065) to the appropriate A dimension. For all lead styles, the number of chips is determined by the capacitance and voltage rating.
- For case code 5, dimensions shall be 2.54 (0.100) maximum and 0.305 (0.012) minimum.
- Lead alignment within pin rows shall be within  $\pm 0.10$  (0.005).

-49470P0-184-A-	SM-45A184-H-240	0.18	J, K	BP	4	A, B, D, C, F

1/ Complete PIN shall include additional symbols replacing dashes (from left to right): product level (M for B level, or T for T level), part style (1 for unencapsulated, 2 for encapsulated), capacitance tolerance, lead configuration

2/ Complete Part Number (provided for reference only) shall include additional symbols replacing dashes (from left to right): part style (0 for unencapsulated and 9 for encapsulated), capacitance tolerance, lead configuration

The last 3 digits of the Part Number represent the chip height of the unencapsulated version. For the encapsulated version, replace the last 3 digits as follows: (120 replace with 270, 240 replace with 390, 360 replace with 530, 480 replace with 660 and 650 replace with 800).

The Important Information/Disclaimer is incorporated in the catalog where these specifications came from or available online at [www.kyocera-avx.com/disclaimer/](http://www.kyocera-avx.com/disclaimer/) by reference and should be reviewed in full before placing any order.

1/ Complete PIN shall include additional symbols replacing dashes (from left to right): product level (M for B level, or T for T level), part style (1 for unencapsulated, 2 for encapsulated), capacitance tolerance, lead configuration

2/ Complete Part Number (provided for reference only) shall include additional symbols replacing dashes (from left to right): part style (0 for unencapsulated and 9 for encapsulated), capacitance tolerance, lead configuration

The last 3 digits of the Part Number represent the chip height of the unencapsulated version. For the encapsulated version, replace the last 3 digits as follows: (120 replace with 270, 240 replace with 390, 360 replace with 530, 480 replace with 660 and 650 replace with 800).

The Important Information/Disclaimer is incorporated in the catalog where these specifications came from or available online at [www.kyocera-avx.com/disclaimer/](http://www.kyocera-avx.com/disclaimer/) by reference and should be reviewed in full before placing any order.

1/ Complete PIN shall include additional symbols replacing dashes (from left to right): product level (M for B level, or T for T level), part style (1 for unencapsulated, 2 for encapsulated), capacitance tolerance, lead configuration

2/ Complete Part Number (provided for reference only) shall include additional symbols replacing dashes (from left to right): part style (0 for unencapsulated and 9 for encapsulated), capacitance tolerance, lead configuration

The last 3 digits of the Part Number represent the chip height of the unencapsulated version. For the encapsulated version, replace the last 3 digits as follows: (120 replace with 270, 240 replace with 390, 360 replace with 530, 480 replace with 660 and 650 replace with 800).

The Important Information/Disclaimer is incorporated in the catalog where these specifications came from or available online at [www.kyocera-avx.com/disclaimer/](http://www.kyocera-avx.com/disclaimer/) by reference and should be reviewed in full before placing any order.

## SM Style SM Military Styles DSCC Dwg. #87106 & #88011

### Ordering Information

**Part Number:** The complete part number shall be as follows:

X7R: 87106

XXX

Drawing number

Dash number  
(see list)

**Ordering Data.** The contract or purchase order should specify the following:

- a. Complete part number.
- b. Requirements for delivery of one copy of the quality conformance inspection data with each shipment of parts by the manufacturer.
- c. Whether the manufacturer performs the group B tests, or provides certification of compliance with group B requirements.
- d. Requirements for notification of change of products to acquiring activity, if applicable.
- e. Requirements for packaging and packing.

### Source of Supply.

Vendor CAGE number	Vendor name and address
Contact factory	KYOCERA AVX

### Performance Characteristics

**Operating Temperature Range.** The operating temperature range shall be -55°C to +125°C.

#### Electrical Characteristics.

Rated Voltage. See tables on pages 26-29.

**Capacitance.** Measured in accordance with method 305 of MIL-STD-202 (1KHz at 1.0Vrms, open circuit voltage, at +25°C).

**Dissipation Factor (+25°C).** X7R: Dissipation factor shall be 2.5 percent maximum (measured under the same conditions as capacitance.) C0G: Dissipation factor shall be 0.15 percent maximum.

#### Temperature Coefficient.

DSCC Dwg.	Bias = 0 volt	Bias = rated voltage
88011 All Voltages	0±30 ppm/°C	0±30 ppm/°C
87106 50 WVDC and 100 WVDC	±15%	+15, -25%
87106 200 WVDC	±15%	+15, -40%
87106 500 WVDC	±15%	+15, -50%

#### Insulation Resistance.

At +25°C, rated voltage: 100K MΩ or 1,000 MΩ-µF, whichever is less.

At +125°C, rated voltage: 10K MΩ or 100 MΩ-µF, whichever is less.

**Dielectric Withstanding Voltage.** Dielectric withstanding voltage shall be 250 percent of rated voltage except 500V rated parts at 150 percent of rated voltage.

**Capacitance Tolerance.** J = ±5 percent, K = ±10 percent, M = ±20 percent.

**Solderability of Terminals.** In accordance with MIL-PRF-49470.

**Resistance to Soldering Heat.** In accordance with MIL-STD-202, method 210, condition B, for 20 seconds.

**Shock.** In accordance with MIL-PRF-49470.

**Immersion Cycling.** In accordance with MIL-PRF-49470.

**Moisture Resistance.** In accordance with MIL-PRF-49470.

**Life.** Life shall be 200 percent of rated voltage except 500V rated parts at 120 percent of rated voltage applied at +125°C for 1,000 hours.

**Thermal Shock.** MIL-STD-202, method 107, test condition A, except high temperature is +125°C.

**Voltage Conditioning.** In accordance with MIL-PRF-49470, except 500V rated parts at 120 percent of rated voltage at +125°C.

**Terminal Strength.** MIL-STD-202, method 211, condition B, except that each lead shall be bent away from the body 90 degrees from the original position and back, two bends.

**Marking.** Marking shall be in accordance with MIL-STD-1285, except the part number shall be as specified in paragraph 1.2 of 87106, or 88011 with the manufacturer's name or code and date code minimum, except case sizes 4 and 5 shall be marked with coded cap and tolerance minimum. Full marking shall be included on the package.

# SMPS Stacked MLC Capacitors

## SM9 Style Technical Information on SMPS Capacitors

KYOCERA AVX is the original inventor of large capacitance value, stacked MLCC capacitors constructed with DIP leads. Similar to SM-product, the SM9-style, encapsulated Switch Mode Power Supply (SMPS) capacitors offer high CV product and extremely low ESR and ESL. SM9-style capacitors offer additional mechanical and thermal protection and are recommended for applications where they will undergo extreme high frequency vibration or mechanical shock. Encapsulated version allows for "strapping" the parts or bonding to the board on the perimeter of the plastic case and thus preventing oscillation and lead breakage.

In addition to traditionally offered COG (Class I) and X7R (Class II) type dielectrics, KYOCERA AVX introduces another class I, temperature compensated N1500 dielectric characterized with very low dissipation factor. Thanks to considerably higher relative dielectric constant of N1500 dielectric, the CV product is more than doubled in comparison to ultra-stable COG dielectric, resulting in a significant reduction in the size of capacitor and a significant improvement of volumetric efficiency.

The typical applications for different type dielectrics are:

- |        |   |
|--------|---|
| COG:   | High frequency resonant capacitors, avionic AC line filters (400Hz to 800Hz), snubbers, timing circuits, high current repetitive discharge                    |
| N1500: | Avionic AC line filters (400Hz to 800Hz), snubbers, high current repetitive discharge, capacitive temperature compensation                                    |
| X7R:   | General filtering, input and output filters in DC/DC converters, bulk filters, DC link capacitors, motor drive filters, high current non-repetitive discharge |

**Not RoHS Compliant**

## GENERAL SPECIFICATIONS FOR ALL DIELECTRIC TYPES

### Operating Temperature Range

-55° to +125°C

### Voltage Ratings

50VDC through 500VDC (+125°C)

### Dielectric Withstanding Voltage

250% rated voltage for 5 seconds with 30 to 50mA charging current (500 Volt units @ 750VDC)

### Insulation Resistance (25°C, rated DC voltage)

100KΩ min. or 1000MΩ-μF min. whichever is less

### Insulation Resistance (125°C, rated DC voltage)

100MΩ min. or 100MΩ-μF min. whichever is less

### Thermal Shock Capabilities

5 cycles (-55°C to +125°C)

### Life Test Capabilities (1000 hours)

200% rated voltage at +125°C (500 Volt units @ 600VDC)

## GENERAL SPECIFICATIONS FOR ALL DIELECTRIC TYPES

### COG Dielectric

#### Capacitance Range

0.01μF to 15μF  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

#### Capacitance Tolerances

±5%, ±10%, ±20%

#### Temperature Characteristic

0 ± 30 ppm/°C

#### Dissipation Factor

0.15% max.  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

### N1500

#### Capacitance Range

0.018μF to 33μF  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

#### Capacitance Tolerances

±5%, ±10%, ±20%

#### Temperature Characteristic

-1500 ± 250 ppm/°C

#### Dissipation Factor

0.15% max.  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

### X7R Dielectric

#### Capacitance Range

0.1μF to 390μF  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

#### Capacitance Tolerances

±10%, ±20%, +80%, -20%

#### Temperature Characteristic

±15%

#### Dissipation Factor

2.5% max.  
(+25°C, 1.0 ± 0.2Vrms at 1kHz)

See tables for capacitance available in specific height and dielectric

Note: Capacitors with X7R dielectric are not intended for applications across AC supply mains or AC line filtering with polarity reversal. Contact plant for recommendations.

\* Hi-Rel screening option. Screening consists of 100% Group A (B Level), Subgroup 1 per MIL-PRF-49470.

\*\* Form, fit & function equivalent to MIL-PRF-49470 part.

Applies to 50V rated parts only. No screening.

\*\*\* Form, fit & function equivalent to MIL-PRF-49470 part. Applies to 50V rated parts only. Hi-Rel screening the same as option B.

Typical ESR Performance (mΩ)

## RM Style Stacked MLC Capacitors

### ELECTRICAL SPECIFICATIONS

#### Temperature Coefficient

C0G: A Temperature Coefficient -  $0 \pm 30$  ppm/ $^{\circ}\text{C}$ , -55° to +125° $^{\circ}\text{C}$   
 X7R: C Temperature Coefficient -  $\pm 15\%$ , -55° to +125° $^{\circ}\text{C}$

#### Capacitance Test (MIL-STD-202 Method 305)

C0G: 25°C, 1.0 $\pm 0.2$  Vrms (open circuit voltage) at 1KHz  
 X7R: 25°C, 1.0 $\pm 0.2$  Vrms (open circuit voltage) at 1KHz

#### Dissipation Factor 25°C

C0G: 0.15% Max @ 25°C, 1.0 $\pm 0.2$  Vrms (open circuit voltage) at 1KHz  
 X7R: 2.5% Max @ 25°C, 1.0 $\pm 0.2$  Vrms (open circuit voltage) at 1KHz

#### Insulation Resistance 25°C (MIL-STD-202 Method 302)

C0G and X7R: 100K MΩ or 1000 MΩ-μF, whichever is less.

#### Insulation Resistance 125°C (MIL-STD-202 Method 302)

C0G and X7R: 10K MΩ or 100 MΩ-μF, whichever is less.

#### Dielectric Withstanding Voltage 25°C (Flash Test)

C0G and X7R: 250% rated voltage for 5 seconds with 50 mA max charging current. (500 Volt units @ 750 VDC)

#### Life Test (1000 hrs)

C0G and X7R: 200% rated voltage at +125°C. (500 Volt units @ 600 VDC)

#### Moisture Resistance (MIL-STD-202 Method 106)

C0G, X7R: Ten cycles with no voltage applied.

#### Thermal Shock (MIL-STD-202 Method 107, Condition A)

#### Immersion Cycling (MIL-STD-202 Method 104, Condition B)

#### Resistance To Solder Heat (MIL-STD-202, Method 210, Condition B, for 20 seconds)

Typical ESR Performance (mΩ)

# SMPS Stacked MLC Capacitors

## SMM Style Stacked MLC Capacitors Extended Range

### GENERAL DESCRIPTION

The SMM series SMPS capacitors incorporate the Super X7R dielectric material. SMM stacked capacitors offer high dielectric constant (K) characteristics allowing for an extended capacitance range. The higher capacitance values in the smaller case sizes reduce the amount of board space needed to mount these components. The SMM series capacitors are designed for use in applications ranging from high end DC/DC converters to general power supplies, telecom networks, snubbers, aerospace instrumentation panels, hybrid power applications and more.

### ELECTRICAL SPECIFICATIONS

**Temperature Coefficient**  
 $\pm 15\%$ ,  $-55^\circ\text{C}$  to  $+125^\circ\text{C}$

**Capacitance Test (MIL-STD-202 Method 305)**  
 $25^\circ\text{C}$ ,  $1.0 \pm 0.2 \text{ Vrms}$  (open circuit voltage) at 1 kHz

**Dissipation Factor 25°C**  
 $2.5\%$  Max @  $25^\circ\text{C}$ ,  $1.0 \pm 0.2 \text{ Vrms}$  (open circuit voltage) at 1 kHz

**Insulation Resistance 25°C (MIL-STD-202 Method 302)**  
 $1000 \text{ M}\Omega\cdot\mu\text{F}$ , whichever is less

**Insulation Resistance 125°C (MIL-STD-202 Method 302)**  
 $100 \text{ M}\Omega\cdot\mu\text{F}$ , whichever is less

**Dielectric Withstanding Voltage 25°C (Flash Test)**  
 $250\%$  rated voltage for 5 seconds with 50 mA maximum charging current (500 Volt units @ 750 VDC)

**Life Test (1000 hrs)**  
 $200\%$  rated voltage for at  $125^\circ\text{C}$  (500 Volts units @ 600 VDC)

**Not RoHS Compliant**

# RoHS Compliant SMPS Stacked MLC Capacitors

## RMM Style Stacked MLC Capacitors Extended Range

### GENERAL DESCRIPTION

The RMM series SMPS capacitors incorporate the Super X7R dielectric material. RMM stacked capacitors offer high dielectric constant (K) characteristics allowing for an extended capacitance range. The higher capacitance values in the smaller case sizes reduce the amount of board space needed to mount these components. The RMM series capacitors are designed for use in applications ranging from high end DC/DC converters to general power supplies, telecom networks, snubbers, aerospace instrumentation panels, hybrid power applications and more.

### ELECTRICAL SPECIFICATIONS

#### Temperature Coefficient

$\pm 15\%$ ,  $-55^\circ\text{C}$  to  $+125^\circ\text{C}$

#### Capacitance Test (MIL-STD-202 Method 305)

$25^\circ\text{C}$ ,  $1.0 \pm 0.2$  Vrms (open circuit voltage) at 1 kHz

#### Dissipation Factor $25^\circ\text{C}$

2.5% Max @  $25^\circ\text{C}$ ,  $1.0 \pm 0.2$  Vrms (open circuit voltage) at 1 kHz

#### Insulation Resistance $25^\circ\text{C}$ (MIL-STD-202 Method 302)

$1000 \text{ M}\Omega\text{-}\mu\text{F}$ , whichever is less

#### Insulation Resistance $125^\circ\text{C}$ (MIL-STD-202 Method 302)

$100 \text{ M}\Omega\text{-}\mu\text{F}$ , whichever is less

#### Dielectric Withstanding Voltage $25^\circ\text{C}$ (Flash Test)

250% rated voltage for 5 seconds with 50 mA maximum charging current (500 Volt units @ 750 VDC)

#### Life Test (1000 hrs)

200% rated voltage for at  $125^\circ\text{C}$  (500 Volts units @ 600 VDC)

# SMPS Stacked MLC Capacitors

## SMX Style for High Temperature Applications up to 200°C

SMX-style, stacked Switch Mode Power Supply Capacitors (SMPS) utilizing Multilayer Ceramic (MLCC) construction are ideally suited for high temperature applications up to 200°C. This product is intended for downhole oil exploration, including logging while drilling, geophysical probes, as well as space and aerospace electronics. The high temperature solder utilized in the construction of SMX-style parts assures reliable operation in harsh environments. The wide product offering provides designers a solution for high capacitance value and high voltage capacitors rated at 200°C. The SMX-style capacitors are ideally suited for applications as DC filters in high power, high frequency motor drives, high pulsed-current circuitry, as well as low power electronics.

SMX-style, SMPS capacitors are characterized with excellent performance in comparison to wet tantalum products. The main benefits of SMX-product over wet tantalum capacitors include:

- Much lower ESR and lower losses
- Excellent capacitance retention with frequency
- Excellent high frequency performance
- Low DC leakage current
- Much higher current handling capabilities

# SMPS Capacitors Chip Assemblies

## CH/CV - Radial, Dual-in-Line, 4 Terminal/SMT 'J' & 'L' Ranges

The CH/CV range exhibits low ESR/ESL making them well suited for high frequency applications. With its' PME technology, the range exhibits high current handling capabilities where as other technologies may not, making them the ideal choice for filtering, smoothing and decoupling circuit applications.

The CH/CV range uses a number of different lead frames types which reduces the thermo-mechanical stresses which makes them the designer's choice for high reliability applications. In combination with this the range uses a stacked capacitor design which saves on PCB space.

### FEATURES

- BS9100 approved
- Voltage range 50-500 V DC
- Dielectrics 2C1/X7R
- Customised ceramic capacitor packages and lead frames available.

Note: KYOCERA AVX does not recommend or advise the use of adhesives to secure the CH/CV components to the PCB

### ELECTRICAL SPECIFICATIONS

#### Temperature Coefficient CECC 30 000, (4.24.1)

2C1/X7R: C Temperature Characteristic - ± 15%, -55° to +125°C

#### Capacitance Test 25°C

2C1/X7R: Measured at 1 VRMS max at 1KHz

#### Dissipation Factor 25°C

2C1/X7R: 2.5% max at 1KHz, 1 VRMS max

#### Insulation Resistance 25°C

2C1/X7R: 100K megohms or 1000 meghoms- $\mu$ F, whichever is less

#### Dielectric Withstanding Voltage 25°C (Flash Test)

2C1/X7R: 250% rated voltage for 5 seconds with 50 mA max charging current. (500 Volt units @ 150% rated voltage)

#### Life Test (1000 hrs) CECC 30 000 (4.23)

2C1/X7R: 200% rated voltage at +125°C.  
(500 Volt units @ 120% rated voltage)

#### Damp Heat IEC 68-2-3, 56 days.

#### Thermal Shock IEC 68-2-14 -55°C to +125°C, 5 cycles

#### Resistance to Solder Heat IEC 68-2-20

#### Vibration IEC 68-2-6 10Hz - 2000Hz, 0.75mm or 98m/sec<sup>2</sup>, 6 hrs.

#### Bump IEC 68-2-29 390m/sec<sup>2</sup>, 4000 bumps

### MARKING

#### CH and CV 4x, 5x, 81-84

A5C

# SMPS Molded Radial MLC Capacitors

## SXP Style for High Temperature Applications up to 200°C

SXP-style, encapsulated radial leaded MLC capacitors are ideally suited for high temperature applications up to 200°C. This product is intended for downhole oil exploration, including logging while drilling, geophysical probes, as well as space, aerospace and hybrid automotive applications. This product supplements the SMX family of capacitors and offers mechanical protection to the ceramic element in extreme harsh environment. The high temperature solder utilized in the construction of SXP-style parts assures reliable operation in high temperature and rugged environments. The SXP-style capacitors are ideally suited for applications as DC filters in high power, high frequency motor drives, high pulsed-current circuitry, as well as standard electronic equipment designed for high temperature applications.

SXP-style, switch mode power supply capacitors are characterized with excellent performance. The main benefits of SXP product include:

- Low ESR, low ESL
- Low DC leakage
- Excellent high frequency performance

### ELECTRICAL SPECIFICATIONS

#### Temperature Coefficient

C0G: A Temperature Coefficient 0 ±30 ppm/°C, -55° to +200°C  
 VHT/X7R: C Temperature Coefficient ±15%, -55°C to +125°C  
 +15% - 56%, -55°C to +200°C

#### Capacitance Test (MIL-STD-202 Method 305)

25°C, 1.0±0.2 Vrms (open circuit voltage) at 1KHz

#### Dissipation Factor 25°C

C0G: 0.15% Max @ 25°C, 1.0±0.2 Vrms (open circuit voltage) at 1KHz  
 VHT/X7R: 2.5% Max @ 25°C, 1.0±0.2 Vrms (open circuit voltage) at 1KHz

#### Insulation Resistance 25°C (MIL-STD-202 Method 302)

100K MΩ or 1000 MΩ·μF, whichever is less.

#### Insulation Resistance 125°C (MIL-STD-202 Method 302)

10K MΩ or 100 MΩ·μF, whichever is less.

**Insulation Resistance 200°C (MIL-STD-202 Method 302)**  
 1K MΩ or 10 MΩ ·μF, whichever is less.

#### Dielectric Withstanding Voltage 25°C (Flash Test)

250% rated voltage for 5 seconds with 50 mA max charging current. (150% for 500 VDC and 120% for 1000 VDC and higher voltage ratings)

# High-CV SMPS Capacitors

TurboCap™

The TurboCap™, MLC capacitors from KYOCERA AVX are characterized with very high capacitance in a small volume. By vertical stacking of the ceramic elements, the footprint required for mounting the capacitors is greatly reduced. TurboCaps™ are ideally suited as filters in the input and output stages of switch mode power supplies (SMPS). With their ultra-low ESR, these capacitors are designed to handle high ripple current at high frequencies and high power levels. The DIP leads in either thru-hole or surface mount configurations offer superior stress relief to the ceramic elements. The leads effectively decouple the parts from the board and minimize thermally or mechanically induced stresses encountered during assembly, temperature cycling or other environmental conditions.

## TYPICAL APPLICATION OF TURBOCAP™ SMPS CAPACITORS FOR INPUT AND OUTPUT FILTERS IN DC/DC CONVERTERS

Performance of SMPS capacitors can be simulated by downloading SpiCalci software program -

<http://www.kyocera-avx.com/download/software/SpiCalci-AVX.zip>

Custom values, ratings and configurations are also available.

## ELECTRICAL SPECIFICATIONS

### Temperature Coefficient

Temperature Coefficient  $\pm 15\%$ , -55° to +125°C

### Capacitance Test (MIL-STD-202 Method 305)

25°C,  $1.0 \pm 0.2$  Vrms (open circuit voltage) at 1KHz

### Dissipation Factor 25°C

2.5% Max @ 25°C,  $1.0 \pm 0.2$  Vrms (open circuit voltage) at 1KHz

### Insulation Resistance 25°C (MIL-STD-202 Method 302)

500 MΩ·μF, whichever is less.

### Insulation Resistance 125°C (MIL-STD-202 Method 302)

50 MΩ·μF, whichever is less.

### Dielectric Withstanding Voltage 25°C (Flash Test)

250% rated voltage for 5 seconds with 50 mA max charging current.

### Life Test (1000 hrs)

X7R: 150% rated voltage at +125°C.

### Moisture Resistance (MIL-STD-202 Method 106)

Ten cycles with no voltage applied.

### Thermal Shock (MIL-STD-202 Method 107, Condition A)

### Immersion Cycling (MIL-STD-202 Method 104, Condition B)

### Resistance To Solder Heat (MIL-STD-202, Method 210, Condition B, for 20 seconds)

Typical ESR Performance (Ω)		
	27µF	47µF
ESR @ 10KHz	0.007	0.004
ESR @ 50KHz	0.003	0.002
ESR @ 100KHz	0.002	0.0015
		0.001

# Small Footprint, High Volumetric Efficiency, High-CV SMPS Capacitors

## Mini-TurboCap™

The Mini-TurboCap is constructed from state-of-the-art BME (Base Metal Electrode) MLC Capacitors achieving very high CV, as well as, ultra low ESR and ESL. The resulting, very large capacitance values allow for component and board space reduction. Stress relieving lead frames provide effective mechanical decoupling of the ceramic chips from the board, minimizing the stress created by board flexing, vibration and temperature cycling. High temperature solder is used to attach chips to the lead frame thus eliminating the risk of solder reflow during assembly to the board.

# Lead Free Ceramic Capacitor in Molded SM Leadframe

## MH Style Ceramic Capacitor

The MH components use a X7R high capacitance value ceramic capacitor in a surface mount precision made moulded case.

The MH capacitor combine the ceramic attributes of very low ESR, non-polar construction, excellent high frequency behaviour and voltage stress capabilities and wide temperature range; with the enhanced mechanical protection of a moulded case. The moulded case is UL94 V-0 flame retardant and the MH is RoHS and also AEC-Q200 compliant.

The MH range provides a lead frame solution to customers who have previously been unable to use large case ceramic capacitors because of mechanical stressing concerns.

For those applications where a tin termination is not acceptable, a Tin/Lead termination is available.

### FEATURES

- Capacitance: 2.2u F – 22  $\mu$ F
- MHs are AEC-Q200 compliant
- Voltage Range DC: 25V – 100V
- Enhanced thermo mechanical stress resistance.

# SMPS Capacitors

## RH Style - Surface Mount 'J' Lead Range

The RH range uses high volumetric efficient X7R capacitors in a "J" style lead frame.

The range of components are uncoated and are suitable for input or output filter capacitors in high frequency DC-DC convertor, automotive, telecom, industrial and military applications.

When large ceramic capacitors are used in applications they can easily be affected by stresses caused by temperature variations, thermal shock, mechanical vibrations and PCB bend movement. The RH range is designed with a "J" type lead frame which greatly reduces all of these thermo mechanical stresses experienced by large capacitors. The RH range allows the capacitors to be doubled stacked so a higher volumetric efficiency can be achieved by the customer and this saves PCB space.

### FEATURES

- RH 21/22 are AEC-Q200 compliant.
- RH range has low ESR/ESL capability
- PCB space saving using double stacked MLCCs
- Enhanced thermo mechanical stress resistance

Note: KYOCERA AVX does not recommend or advise the use of adhesives to secure the RH components to the PCB.

### ELECTRICAL SPECIFICATIONS

**Temperature Coefficient** CECC 30 000, (4.24.1)  
X7R: C Temperature Characteristic -  $\pm 15\%$ , -55°C to +125°C

#### Capacitance Test

Measured at 1 VRMS max at 1KHz

#### Dissipation Factor 25°C

2.5% max at 1KHz, 1 VRMS max

#### Insulation Resistance 25°C

100K megohms or 1000 megohms- $\mu$ F, whichever is less

#### Dielectric Withstanding Voltage 25°C (Flash Test)

250% rated voltage for 5 seconds with 50 mA max charging current. (500 Volt units @ 150% rated voltage)

#### Life Test (1000 hrs) CECC 30 000 (4.23)

200% rated voltage at +125°C.

(500 Volt units @ 120% rated voltage)

#### Thermal Shock IEC 68.2.14

-55°C to +125°C, 5 cycles

#### Resistance to Solder Heat IEC 68.2.20

Typical ESR (mΩ) 3 μF, 100V X7R						
ESR @ 100KHz						17
ESR @ 500KHz						12

## Custom Geometries and Lead Configurations

For the requirements that cannot be satisfied by standard SMPS style products (SM0-style or SM9-style), KYOCERA AVX offers leading edge solutions in custom configuration and packaging. Ranging from unique geometries, lead configurations, packaging and stress relief mounting options, KYOCERA AVX has optimized solutions for a wide range of customer specific designs. The solutions provided by KYOCERA AVX maintain high reliability of stacked capacitor product originally developed by KYOCERA AVX and historically recognized as the highest reliability product in the market. Custom packaging options provide solutions that eliminate reliability concerns in the next level assembly. These custom options provide the following benefits:

- eliminate soldering requirements altogether by providing means

of electrical/mechanical connection to the circuit

- provide options for remote soldering away from large ceramic capacitor body and eliminating the risk of thermal shock (refer to photograph with soft, insulated leads soldered to the stacked capacitor using high melting point SN10 solder)

Many other innovations are available from KYOCERA AVX. Let them apply these ideas to your application specific requirements. Please contact KYOCERA AVX for a solution that will meet demands of your program requirements.

## Assembly Guidelines

### Reliability

KYOCERA AVX has been involved in numerous military and customer High Reliability programs for over 40 years.

Reliability [% Failure Rate (FR%) or Mean Time Between Failure (MTBF)] is based on the number of failures and the cumulative test hours expanded by test versus use acceleration factors. The acceleration factors are calculated according to the following relationships:

Military Reliability levels are usually expressed in terms of rated

$$\text{Temperature Acceleration} = \left( \frac{T_T - T_U}{25} \right)$$

Where:

$T_T$  = test temp. (°C)

$T_U$  = use temp. (°C)

$$\text{Voltage Acceleration} = \left( \frac{V_T}{V_U} \right)^3$$

Where:

$V_T$  = test voltage

$V_U$  = use voltage

conditions versus test conditions (generally 125°C and 2X WVDC). If actual conditions are less than rated, the reliability levels will improve significantly over rated and can be calculated by use of the above relationship for determining accelerated test hours. For example, if the actual use conditions were 75°C and 1/2 WVDC rating for a 125°C rated part, the acceleration factors are 64X for voltage and 100X for temperature. Reliabilities based on current testing can be obtained by contacting KYOCERA AVX.

### General Processing Guidelines

#### Soldering

The SM styles capacitors are generally quite large relative to other types of MLC capacitors. As a result of the size, precautions must be taken before subjecting the parts to any soldering operation in order to prevent thermal shock. Preheat prior to soldering is essential. The heating rate of the SupraCap® ceramic bodies during preheat must not exceed 4°C/second. The preheat temperature must be within 50°C of the peak temperature reached by the ceramic bodies, adjacent to lead material, through the soldering process. The leads are attached to the chip stack with 10 / 88 / 2 (Sn / Pb / Ag, Solidus 268°C, Liquidus 290°C).

### Vibration Specifications\*

Due to the weight of the SupraCap® and the size and strength of the lead frame used, when the SupraCap® is to be used in an application where it will undergo high frequency vibration, we strongly recommend using our potted SM9 styles SupraCap®.

If other DIP styles SupraCap® are to be used in a high frequency vibration environment, the SupraCap® should be supported in some way to prevent oscillation of the capacitor assembly which will result in lead breakage. If "strapping" the SupraCap® to the board is the chosen method of support, care should be taken not to chip the ceramic or apply undue pressure so that cracking of the ceramic results.

If bonding the SupraCap® to the board with adhesive, consideration of the CTE (coefficient of thermal expansion) is necessary. A mismatch between the CTE of the ceramic and adhesive can cause the ceramic to crack during temperature cycles.

### Processing Guidelines\*

There are practical size limitations for MLCs which prohibit reliable direct mounting of chip capacitors larger than 2225 (.22" x .25") to a substrate. These large chips are subject to thermal shock racking and thermal cycling solder joint fatigue. Even 1812 (.18" x .12") and 2225 chip capacitors will have solder joint failures due to mechanical fatigue after  $\approx$  1500 thermal cycles from 0 to 85°C on FR4 and  $\approx$  3000 cycles on alumina from -55 to 125°C. This is due to differences in the Coefficient of Thermal Expansion (CTE) between MLCs and substrate materials used in hybrids and surface mount assemblies. Materials used in the manufacture of all electronic components and substrates have wide ranges of CTEs as shown in Table 1.

Table I

#### CTEs of Typical Components and Substrates

Material	CTE (ppm/°C)
Alloy 42	5.3
Alumina	$\sim$ 7
Barium Titanate Capacitor Body	10-12
Copper	17.6
Copper Clad Invar	6-7
Filled Epoxy Resin (<TR)	18-25
FR4/G-10 PC Board (X, Y)	$\sim$ 18
Nickel or Steel	15
Polyimide/Glass PCB (X, Y)	$\sim$ 12
Polyimide/Kevlar PCB (X, Y)	$\sim$ 7
Tantalum	6.5
Tin Lead Alloys	$\sim$ 27

### Linear Displacement

This CTE difference translates into mechanical stress that is due to the linear displacement of substrate and component. Linear displacement is a function of  $\Delta$ CTE ( $\text{CTE}_{\text{sub}} - \text{CTE}_{\text{comp}}$ ) and the overall length of the component. Long components/ substrates have large linear displacements even with a small  $\Delta$ CTE which will cause high stress in the solder joints and fatigue after a few temperature cycles. Figure 1 shows linear displacement for conditions where  $\Delta$ CTE is positive and negative.

\* Reference KYOCERA AVX Technical Information paper, "Processing Guidelines for SMPS Capacitors."

# SMPS Capacitors

## Assembly Guidelines

## General Processing Guidelines

Figure 2 shows the location of maximum stress in the solder joint due to positive and negative DCTE and linear displacement.

## Stress Relief

Leadframes on larger capacitor sizes (greater than 2225) must be used to minimize mechanical stress on the solder joints during temperature cycling which is normal operation for power supplies (Figure 3). Failing solder joints increase both ESR and ESL causing an increase in ripple, noise and heat, accelerating failure.

## Layout

Effective solder dams must be used to keep all molten solder on the solder lands during reflow or solder will migrate away from the land, causing opens or weak solder joints. High frequency output filters cannot use low power layout techniques such as necked down conductors because of the stringent inductance requirements.

Figure 3. "J" and "L" Leadframes Mounted on Capacitors to Relieve Stress

## Inductance

Adding leadframes has a small impact on component inductance but this is the price that must be paid for reliable operation over temperature. Figure 4 shows typical leadframe inductance that is added for two lead standoff distances (0.020" and 0.050") versus the number of leads along one side of SupraCap® which are specifically designed output filter capacitors for 1 MHz and above switchers. The actual inductance will be somewhat less because the leadframes flare out from the lead where the lead-frame is attached to the capacitor body.

Figure 4. Number of Leads on One Side of Capacitor vs. Total Leadframe Inductance vs. Substrate Standoff Height

Very high frequency switch mode power supplies place tremendous restrictions on output filter capacitors. In addition to handling high ripple current (low ESR), ESL must approach zero nano henrys, part must be truly surface mountable and be available in new configurations to be integrated into transmission lines to further reduce inductance with load currents greater than 40A at 1 MHz and as frequencies move above 1-2 MHz.

The total inductance is the sum of each side of the part where the inductance of one side is the parallel combination of each lead in the leadframe. That inductance is given by:

$$L \text{ (nH)} = 5x\ell \left[ \ln(2x\ell) / (B+C) + 1/2 \right]$$

Where  $\ell$  = lead length in inches  
 $\ln$  = natural log  
 $B+C$  = lead cross section in inches

so  $L_1 \text{ (nH)} = 2xL \text{ (nH)}$  where  $L_1$  is the total inductance of the leadframe.

## SK Style – Commercial Radial Range

### PRODUCT OFFERING – C0G, N1500 AND X7R

SK styles are conformally coated MLC capacitors for input or output filtering in switch mode power supplies. They are specially processed to handle high currents and are low enough in cost for commercial SMPS application.

### ELECTRICAL SPECIFICATIONS

#### Temperature Coefficient

C0G: A Temperature Coefficient –  $0 \pm 30 \text{ ppm}/^\circ\text{C}$ , -55° to +125°C

N1500: 4 Temperature Coefficient –  $-1500 \pm 250 \text{ ppm}/^\circ\text{C}$

X7R: C Temperature Coefficient –  $\pm 15\%$ , -55° to +125°C

#### Capacitance Test (MIL-STD-202 Method 305)

C0G, N1500: 25°C,  $1.0 \pm 0.2 \text{ Vrms}$  (open circuit voltage) at 1KHz

X7R: 25°C,  $1.0 \pm 0.2 \text{ Vrms}$  (open circuit voltage) at 1KHz

#### Dissipation Factor 25°C

C0G, N1500: 0.15% Max @ 25°C,  $1.0 \pm 0.2 \text{ Vrms}$  (open circuit voltage) at 1KHz

X7R: 2.5% Max @ 25°C,  $1.0 \pm 0.2 \text{ Vrms}$  (open circuit voltage) at 1KHz

#### Insulation Resistance 25°C (MIL-STD-202 Method 302)

C0G, N1500, X7R: 100K MΩ or 1000 MΩ·μF, whichever is less.

#### Insulation Resistance 125°C (MIL-STD-202 Method 302)

C0G, N1500, X7R: 10K MΩ or 100 MΩ·μF, whichever is less.

#### Dielectric Withstanding Voltage 25°C (Flash Test)

C0G, N1500, X7R: 250% rated voltage for 5 seconds with 50 mA max charging current. (500 Volt units @ 750 VDC)

#### Life Test (1000 hrs)

C0G, N1500, X7R: 200% rated voltage at +125°C. (500 Volt units @ 600 VDC)

#### Moisture Resistance (MIL-STD-202 Method 106)

C0G, N1500, X7R, Z5U: Ten cycles with no voltage applied.

#### Thermal Shock (MIL-STD-202 Method 107, Condition A)

#### Immersion Cycling (MIL-STD-202 Method 104, Condition B)

Resistance To Solder Heat (MIL-STD-202, Method 210, Condition B, for 20 seconds)

### HOW TO ORDER

## SE Style – Extended Commercial Radial Range

### PRODUCT OFFERING – X7R

SE styles offer capacitance extension to popular SK ranges. The CV product for SE-series, X7R capacitors (TCC:  $\pm 15\%$  over -55 to +125°C) compares favorably to high CV ranges offered by other suppliers in much less stable Y5U dielectric (TCC: +22/-56% over -30 to +85°C). SE style capacitors are conformally coated and are designed for input and output filtering applications in switch mode power supplies.

### ELECTRICAL SPECIFICATIONS

#### Temperature Coefficient

X7R: Temperature Coefficient  $\pm 15\%$ , -55° to +125°C

#### Capacitance Test (MIL-STD-202 Method 305)

X7R: 25°C, 1.0 $\pm 0.2$  Vrms (open circuit voltage) at 1KHz

#### Dissipation Factor 25°C

X7R: 2.5% Max @ 25°C, 1.0 $\pm 0.2$  Vrms (open circuit voltage) at 1KHz

#### Insulation Resistance 25°C (MIL-STD-202 Method 302)

X7R: 100K MΩ or 1000 MΩ-μF, whichever is less.

#### Insulation Resistance 125°C (MIL-STD-202 Method 302)

X7R: 10K MΩ or 100 MΩ-μF, whichever is less.

#### Dielectric Withstanding Voltage 25°C (Flash Test)

X7R: 250% rated voltage for 5 seconds with 50 mA max charging current.

#### Life Test (1000 hrs)

X7R: 200% rated voltage at +125°C

#### Moisture Resistance (MIL-STD-202 Method 106)

X7R: Ten cycles with no voltage applied.

#### Thermal Shock (MIL-STD-202 Method 107, Condition A)

#### Immersion Cycling (MIL-STD-202 Method 104, Condition B)

**Resistance To Solder Heat (MIL-STD-202, Method 210, Condition B, for 20 seconds)**

### HOW TO ORDER

SE	01	3	C	125	M	A	A	*
Style	Size	Voltage	Temperature Coefficient	Capacitance Code	Capacitance Tolerance	Test Level	Leads	Packaging
	See chart below	25V = 3 50V = 5 100V = 1	X7R = C	(2 significant digits + no. of zeros) 22 nF = 223 220 nF = 224 1 μF = 105 100 μF = 107	X7R: K = $\pm 10\%$ M = $\pm 20\%$ Z = +80, -20%	A = Standard	A = Tin/Lead R = RoHS Compliant*	(See Note 1)

Note: Capacitors with X7R dielectrics are not intended for applications across AC supply mains or AC line filtering with polarity reversal. Contact plant for recommendations.

Note 1: No suffix signifies bulk packaging, which is KYOCERA AVX standard packaging.  
Parts available tape and reel per EIA-468. Use suffix "TR1" if tape & reel is required.

\*Hi-Rel screening consists of 100% Group A, Subgroup 1 per MIL-PRF-39014.

TAPE & REEL QUANTITY	
Part	Pieces
SE01	2000
SE03/SE53	1000
SE04/SE54	1000
SE05/SE55	500
SE06/SE56	500

# High Voltage MLC Capacitors

## ESCC Qualified SMPS Capacitors

### HIGH VOLTAGE CHIP CAPACITORS

Capacitors, Fixed, Chip, Ceramic Dielectric, Type II, High Voltage, Based on Styles 1812 and 1825 for use in ESCC space programs, according to ESCC Generic Specification 3009 and associated Detail Specification 3009/034 as recommended by the Space Components Coordination Group. (ranges in table below)

Note: Variants 01 to 12: metallized pads suitable for Hybrid circuits, glue or wire bonding Variants 13 to 24: finished with Sn coating suitable for soldering Variants 13 - 24 are tested "in accordance with"

### HOW TO ORDER

Parts should be ordered using the ESCC variant number as follows:

**3009034      XX      XXX**

Detail Spec Number	Type Variant (per table)	Capacitance Code
--------------------	--------------------------	------------------

The first two digits represent significant figures and the third digit specifies the number of zeros to follow; i.e.

102 = 1000pF  
103 = 10000pF

Eg 300903401223

For LVT testing, please refer to 3009 LVT Spec

Size	Variant	Rated Voltage (kV)	Tolerance (%)	Capacitance Code (E12)
1812	01 / 13	1.0	±10	392 - 223
	02 / 14		±20	
	03 / 15	2.0	±10	152 - 182
	04 / 16		±20	
	05 / 17	3.0	±10	821 - 102
	06 / 18		±20	
1825	07 / 19	1.0	±10	273 - 563
	08 / 20		±20	
	09 / 21	2.0	±10	222 - 682
	10 / 22		±20	
	11 / 23	3.0	±10	821 - 392
	12 / 24		±20	

### HIGH VOLTAGE LEADED CAPACITORS

Capacitors, Fixed, Ceramic Dielectric, Type II, High Voltage, 1.0 to 5.0 kV, Based on Case Styles VR, CV and CH for use in ESCC space programs, according to ESCC Generic Specification 3001 and associated Detail Specification 3001/034 as recommended by the Space Components Coordination Group. (ranges in table)

Note 1: Lead Types

- a - Leaded Radial (epoxy coated)
- b - Leaded Radial (Polyurethane Varnish)
- c - Straight Dual in Line
- d - L Dual in Line

Note 2: Tolerances of ±10% and ±20% are available

Note 3: KYOCERA AVX does not recommend or advise the use of adhesives to secure these components to the PCB or any other component / device

Case Size	Variant	Lead Type	Capacitance Code (E12)

# High Voltage MLC Leaded

## HV Styles (US Preferred Sizes) DIP Lead

## COG Dielectric General Specifications

### Capacitance Range

100 pF to 1.2 µF  
(25°C, 1.0±0.2 Vrms (open circuit voltage)  
at 1 KHz, for ≤100 pF use 1 MHz)

### Capacitance Tolerances

±5%, ±10%, ±20%

### Operating Temperature Range

-55°C to +125°C

### Temperature Characteristic

0 ± 30 ppm/°C

### Voltage Ratings

1000 VDC thru 5000 VDC (+125°C)

### Dissipation Factor

0.15% max.

(25°C, 1.0±0.2 Vrms (open circuit voltage)  
at 1 KHz, for ≤100 pF use 1 MHz)

### Insulation Resistance (+25°C, at 500V)

100K MΩ min., or 1000 MΩ-µF min.,  
whichever is less

### Insulation Resistance (+125°C, at 500V)

10K MΩ min., or 100 MΩ-µF min.,  
whichever is less

### Dielectric Strength

120% rated voltage, 5 seconds

### Life Test

100% rated and +125°C

## N1500 General Specifications

### Capacitance Range

100 pF to 1.9 µF  
(25°C, 1.0±0.2 Vrms (open circuit voltage)  
at 1 KHz)

### Capacitance Tolerances

±5%, ±10%, ±20%

### Operating Temperature Range

-55°C to +125°C

### Temperature Characteristic

-1500 ±250 ppm/°C

### Voltage Ratings

1000 VDC thru 5000 VDC (+125°C)

### Dissipation Factor

0.15% max.

(25°C, 1.0±0.2 Vrms (open circuit voltage)  
at 1 KHz)

### Insulation Resistance (+25°C, at 500V)

100K MΩ min., or 1000 MΩ-µF min.,  
whichever is less

### Insulation Resistance (+125°C, at 500V)

10K MΩ min., or 100 MΩ-µF min.,  
whichever is less

### Dielectric Strength

120% rated voltage, 5 seconds

### Life Test

100% rated and +125°C

## X7R Dielectric General Specifications

### Capacitance Range

100 pF to 15 µF  
(25°C, 1.0±0.2 Vrms (open circuit voltage)  
at 1 KHz)

### Capacitance Tolerances

±10%, ±20%, +80%, -20%

### Operating Temperature Range

-55°C to +125°C

### Temperature Characteristic

±15% (0 VDC)

### Voltage Ratings

1000 VDC thru 5000 VDC (+125°C)

### Dissipation Factor

2.5% max.

(25°C, 1.0±0.2 Vrms (open circuit voltage) at  
1 KHz)

### Insulation Resistance (+25°C, at 500V)

100K MΩ min., or 1000 MΩ-µF min.,  
whichever is less

### Insulation Resistance (+125°C, at 500V)

10K MΩ min., or 100 MΩ-µF min.,  
whichever is less

### Dielectric Strength

120% rated voltage, 5 seconds

### Life Test

100% rated and +125°C

## High Voltage MLC Leaded

RV Style – RoHS Compliant High Voltage DIP Leaded

## COG Dielectric General Specifications

### Capacitance Range

100 pF to 1.2 µF  
(25°C, 1.0±0.2 Vrms (open circuit voltage) at 1 KHz, for ≤100 pF use 1 MHz)

### Capacitance Tolerances

±5%, ±10%, ±20%

### Operating Temperature Range

-55°C to +125°C

### Temperature Characteristic

0 ± 30 ppm/°C

### Voltage Ratings

1000 VDC thru 5000 VDC (+125°C)

### Dissipation Factor

0.15% max.

(25°C, 1.0±0.2 Vrms (open circuit voltage) at 1 KHz, for ≤100 pF use 1 MHz)

### Insulation Resistance (+25°C, at 500V)

100K MΩ min., or 1000 MΩ-µF min., whichever is less

### Insulation Resistance (+125°C, at 500V)

10K MΩ min., or 100 MΩ-µF min., whichever is less

### Dielectric Strength

120% rated voltage, 5 seconds

### Life Test

100% rated and +125°C

## N1500 General Specifications

### Capacitance Range

100 pF to 1.9 µF  
(25°C, 1.0±0.2 Vrms (open circuit voltage) at 1 KHz)

### Capacitance Tolerances

±5%, ±10%, ±20%

### Operating Temperature Range

-55°C to +125°C

### Temperature Characteristic

-1500 ±250 ppm/°C

### Voltage Ratings

1000 VDC thru 5000 VDC (+125°C)

### Dissipation Factor

0.15% max.

(25°C, 1.0±0.2 Vrms (open circuit voltage) at 1 KHz)

### Insulation Resistance (+25°C, at 500V)

100K MΩ min., or 1000 MΩ-µF min., whichever is less

### Insulation Resistance (+125°C, at 500V)

10K MΩ min., or 100 MΩ-µF min., whichever is less

### Dielectric Strength

120% rated voltage, 5 seconds

### Life Test

100% rated and +125°C

## X7R Dielectric General Specifications

### Capacitance Range

100 pF to 15 µF  
(25°C, 1.0±0.2 Vrms (open circuit voltage) at 1 KHz)

### Capacitance Tolerances

±10%, ±20%, +80%, -20%

### Operating Temperature Range

-55°C to +125°C

### Temperature Characteristic

±15% (0 VDC)

### Voltage Ratings

1000 VDC thru 5000 VDC (+125°C)

### Dissipation Factor

2.5% max.

(25°C, 1.0±0.2 Vrms (open circuit voltage) at 1 KHz)

### Insulation Resistance (+25°C, at 500V)

100K MΩ min., or 1000 MΩ-µF min., whichever is less

### Insulation Resistance (+125°C, at 500V)

10K MΩ min., or 100 MΩ-µF min., whichever is less

### Dielectric Strength

120% rated voltage, 5 seconds

### Life Test

100% rated and +125°C

# High Voltage MLC Leaded

## CH Style – Radial, Dual-in-line & 'L' Lead SMT

Capacitance range: 1.2 nF to 2.7  $\mu$ F

Voltage range: 1kV to 5kV

Temperature range: -55°C to +125°C

This range of radial, dual-in-line for both through hole and surface mount products is intended for use in high voltage power supplies and voltage multiplier circuits. The multilayer ceramic construction offers excellent volumetric efficiency compared with other high voltage dielectrics. They are suitable for both high reliability and industrial applications.

### ELECTRICAL SPECIFICATIONS

**Temperature Coefficient** CECC 30 000, (4.24.1)  
2C1/X7R: C Temperature Characteristic -  $\pm 15\%$  (0v dc)

#### Capacitance Test 25°C

2C1/X7R: Measured at 1 VRMS max at 1KHz

#### Dissipation Factor 25°C

2C1/X7R: 2.5% max at 1KHz, 1 VRMS

#### Insulation Resistance

2C1/X7R: 100K megohms or 1000 megohms- $\mu$ F, whichever is less

#### Dielectric Withstanding Voltage 25°C

130% rated voltage for 5 seconds

**Life Test** (1000 hrs) CECC 30000 (4.23)  
12C1/X7R: 120% rated voltage at +125°C.

#### Aging

2C1/X7R: 2.5%/decade hour

# High Voltage MLC Leaded

## SV Style Radial Lead – Application Information

High value, low leakage and small size are difficult parameters to obtain in capacitors for high voltage systems. KYOCERA AVX special high voltage MLC radial leaded capacitors meet these performance characteristics. The added advantage of these capacitors lies in special internal design minimizing the electric field stresses within the MLC. These special design criteria result in significant reduction of partial discharge activity within the dielectric and having, therefore, a major impact on long-term reliability of the product. The SV high voltage radial capacitors are conformally coated with high insulation resistance, high dielectric strength epoxy eliminating the possibility of arc flashover.

The SV high voltage radial MLC designs exhibit low ESRs at high frequency. The same criteria governing the high voltage design carries the added benefits of extremely low ESR in relatively low capacitance and small packages. These capacitors are designed and are ideally suited for applications such as snubbers in high frequency power converters, resonators in SMPS, and high voltage coupling/DC blocking.

### COG Dielectric General Specifications

#### Capacitance Range

10 pF to 0.15 µF  
 (+25°C, 1.0 ±0.2 Vrms at 1kHz,  
 for ≤100 pF use 1 MHz)

#### Capacitance Tolerances

±5%, ±10%, ±20%

#### Operating Temperature Range

-55°C to +125°C

#### Temperature Characteristic

0 ± 30 ppm/°C

#### Voltage Ratings

600 VDC thru 5000 VDC (+125°C)

#### Dissipation Factor

0.15% max.  
 (+25°C, 1.0 ±0.2 Vrms at 1kHz,  
 for ≤100 pF use 1 MHz)

#### Insulation Resistance (+25°C, at 500V)

100K MΩ min. or 1000 MΩ·µF min.,  
 whichever is less

#### Insulation Resistance (+125°C, at 500V)

10K MΩ min., or 100 MΩ·µF min.,  
 whichever is less

#### Dielectric Strength

120% rated voltage, 5 seconds

#### Life Test

100% rated and +125°C

### N1500 General Specifications

#### Capacitance Range

100 pF to 0.47 µF  
 (+25°C, 1.0 ±0.2 Vrms (open circuit voltage)  
 at 1kHz)

#### Capacitance Tolerances

±5%, ±10%, ±20%

#### Operating Temperature Range

-55°C to +125°C

#### Temperature Characteristic

-1500 ±250 ppm/°C

#### Voltage Ratings

600 VDC thru 5000 VDC (+125°C)

#### Dissipation Factor

0.15% max.  
 (25°C, 1.0 ±0.2 Vrms (open circuit voltage)  
 at 1 KHz)

#### Insulation Resistance (+25°C, at 500V)

100K MΩ min., or 1000 MΩ·µF min.,  
 whichever is less

#### Insulation Resistance (+125°C, at 500V)

10K MΩ min., or 100 MΩ·µF min.,  
 whichever is less

#### Dielectric Strength

120% rated voltage, 5 seconds

#### Life Test

100% rated and +125°C

### X7R Dielectric General Specifications

#### Capacitance Range

100 pF to 2.2 µF  
 (+25°C, 1.0 ±0.2 Vrms at 1kHz)

#### Capacitance Tolerances

±10%, ±20%, +80%, -20%

#### Operating Temperature Range

-55°C to +125°C

#### Temperature Characteristic

±15% (0 VDC)

#### Voltage Ratings

600 VDC thru 5000 VDC (+125°C)

#### Dissipation Factor

2.5% max.  
 (+25°C, 1.0 ±0.2 Vrms at 1kHz)

#### Insulation Resistance (+25°C, at 500V)

100K MΩ min., or 1000 MΩ·µF min.,  
 whichever is less

#### Insulation Resistance (+125°C, at 500V)

10K MΩ min., or 100 MΩ·µF min.,  
 whichever is less

#### Dielectric Strength

120% rated voltage, 5 seconds

#### Life Test

100% rated and +125°C

Performance of SMPS capacitors can be simulated by downloading SpiCalci software program -

## SV Style Radial Lead – Application Information

SV01 thru SV17

SV52 thru SV59 and SV63 thru SV67

**Not RoHS Compliant**

For RoHS compliant products,  
please select correct termination style.

### HIGH VOLTAGE RADIAL LEAD

### HOW TO ORDER

### Styles: SV01 THRU SV67

SV01	A Style	A Voltage	A Temperature Coefficient	102 Capacitance Code (2 significant digits + no. of zeros)	K Capacitance Tolerance	A Test Level	A Leads	* Packaging (See Note 1)
		600V/630V = C						
		1000V = A	COG = A					
		1500V = S	X7R = C					
		2000V = G	N1500 = 4					
		2500V = W						
		3000V = H						
		4000V = J						
		5000V = K						

Note: Capacitors with X7R dielectrics are not intended for applications across AC supply mains or AC line filtering with polarity reversal. Contact plant for recommendations.

\*Hi-Rel screening consists of 100% Group A, Subgroup 1 per MIL-PRF-49467. (Except partial discharge testing is not performed and DWV is at 120% rated voltage).

## SV Style Automotive Grade Radial Lead – Application Information

Automotive grade, AEC-Q200 qualified SV-style capacitors are designed with COG (NPO), class I dielectric that is characterized with very low dielectric losses. This product is designed for AC applications requiring capacitors capable of handling high AC currents at high frequencies.

With emergence of strongly coupled magnetic resonance technology that allows for highly efficient wireless transmission of power to recharge batteries, the need for low loss capacitors is apparent. Thanks to their extremely low dissipation factor, automotive grade SV-style parts can reliably handle high rms currents with minimal power losses in medium to high power resonant converters. Multiple parts in parallel may be required depending on the power transmission levels.

The automotive grade SV-style capacitors are conformally coated eliminating possibility of arc flashover. The leaded construction provides mechanical decoupling of MLCC chip from the board and thus provides effective stress relief required for automotive applications.

### COG Dielectric General Specifications

#### Capacitance Range

1000pF to 0.015 µF  
(+25°C, 1.0 ±0.2 Vrms at 1kHz)

#### Capacitance Tolerances

±5%, ±10%, ±20%

#### Operating Temperature Range

-55°C to +125°C

#### Temperature Characteristic

0 ± 30 ppm/°C

#### Voltage Ratings

1000 VDC (+125°C)

#### Dissipation Factor

0.1% max.

(+25°C, 1.0 ±0.2 Vrms at 1kHz,

#### Insulation Resistance (+25°C, at 500V)

100K MΩ min. or 1000 MΩ-µF min., whichever is less

#### Insulation Resistance (+125°C, at 500V)

10K MΩ min., or 100 MΩ-µF min., whichever is less

#### Dielectric Strength

120% rated voltage, 5 seconds

#### Life Test

100% rated and +125°C

### Typical Impedance and ESR Characterization

# MLC Chip Capacitors

## Basic Construction

A multilayer ceramic (MLC) capacitor is a monolithic block of ceramic containing two sets of offset, interleaved planar electrodes that extend to two opposite surfaces of the ceramic dielectric. This simple structure requires a considerable amount of sophistication,

both in material and in manufacture, to produce it in the quality and quantities needed in today's electronic equipment.

## Terminations

- Standard Nickel Barrier  
Lead Free Tin Plate (RoHS Compliant)  
5% minimum Lead Plated
- Leach resistance to 90 seconds at 260°C
- Solderable plated for dimensional control
- Special materials as required

## QUALITY STATEMENT

KYOCERA AVX focus is customer satisfaction – Customer satisfaction in the broadest sense: Products, service, price, delivery, technical support, and all the aspects of a business that impact you, the customer.

Our long term strategy is for continuous improvement which is defined by our Quality Vision 2000. This is a total quality management system developed by and supported by KYOCERA AVX management. The foundation of QV2000 is built upon military and

commercial standards and systems including ISO9001. QV2000 is a natural extension of past quality efforts with world class techniques for ensuring a total quality environment to satisfy our customers during this decade and into the 21st century.

As your components supplier, we invite you to experience the quality, service, and commitment of KYOCERA AVX.

# MLC Chip Capacitors

## General Description

**Table 1: EIA and MIL Temperature Stable and General Application Codes**

EIA CODE	
Percent Capacity Change Over Temperature Range	
RS198	Temperature Range
X7	-55°C to +125°C
X5	-55°C to +85°C
Y5	-30°C to +85°C
Z5	+10°C to +85°C
Code	Percent Capacity Change
D	±3.3%
E	±4.7%
F	±7.5%
P	±10%
R	±15%
S	±22%
T	+22%, -33%
U	+22%, -56%
V	+22%, -82%

EXAMPLE - A capacitor is desired with the capacitance value at 25°C to increase no more than 7.5% or decrease no more than 7.5% from -30°C to +85°C. EIA Code will be Y5F.

MIL CODE		
Symbol	Temperature Range	
A	-55°C to +85°C	
B	-55°C to +125°C	
C	-55°C to +150°C	
Symbol	Cap. Change Zero Volts	Cap. Change Rated Volts
Q	+15%, -15%	+15%, -50%
R	+15%, -15%	+15%, -40%
W	+22%, -56%	+22%, -66%
X	+15%, -15%	+15%, -25%
Y	+30%, -70%	+30%, -80%
Z	+20%, -20%	+20%, -30%

Temperature characteristic is specified by combining range and change symbols, for example BR or AW. Specification slash sheets indicate the characteristic applicable to a given style of capacitor.

In specifying capacitance change with temperature for Class 2 materials, EIA expresses the capacitance change over an operating temperature range by a 3 symbol code.

The first symbol represents the cold temperature end of the temperature range, the second represents the upper limit of the operating temperature range and the third symbol represents the capacitance change allowed over the operating temperature range. Table 1 provides a detailed explanation of the EIA system.

**Effects of Voltage** – Variations in voltage have little effect on Class 1 dielectric but does affect the capacitance and dissipation factor of Class 2 dielectrics. The application of DC voltage reduces both the capacitance and dissipation factor while the application of an AC voltage within a reasonable range tends to increase both capacitance and dissipation factor readings. If a high enough AC voltage is applied, eventually it will reduce capacitance just as a DC voltage will. Figure 2 shows the effects of AC voltage.

Figure 2

Capacitor specifications specify the AC voltage at which to measure (normally 0.5 or 1 VAC) and application of the wrong voltage can cause spurious readings.

**Typical Cap. Change vs. Temperature X7R**

Figure 3

# MLC Chip Capacitors

## General Description

**Effects of Time** – Class 2 ceramic capacitors change capacitance and dissipation factor with time as well as temperature, voltage and frequency. This change with time is known as aging. Aging is caused by a gradual re-alignment of the crystalline structure of the ceramic and produces an exponential loss in capacitance and decrease in dissipation factor versus time. A typical curve of aging rate for semistable ceramics is shown in Figure 4.

If a Class 2 ceramic capacitor that has been sitting on the shelf for a period of time, is heated above its curie point, (125°C for 4 hours or 150°C for 1/2 hour will suffice) the part will de-age and return to its initial capacitance and dissipation factor readings. Because the capacitance changes rapidly, immediately after de-aging, the basic capacitance measurements are normally referred to a time period sometime after the de-aging process. Various manufacturers use different time bases but the most popular one is one day or twenty-four hours after "last heat." Change in the aging curve can be caused by the application of voltage and other stresses. The possible changes in capacitance due to de-aging by heating the unit explain why capacitance changes are allowed after test, such as temperature cycling, moisture resistance, etc., in MIL specs. The application of high voltages such as dielectric withstanding voltages also tends to de-age capacitors and is why re-reading of capacitance after 12 or 24 hours is allowed in military specifications after dielectric strength tests have been performed.

**Effects of Frequency** – Frequency affects capacitance and impedance characteristics of capacitors. This effect is much more pronounced in high dielectric constant ceramic formulation than in low K formulations. KYOCERA AVX's SpiCalci software generates impedance, ESR, series inductance, series resonant frequency and capacitance all as functions of frequency, temperature and DC bias for standard chip sizes and styles. It is available free from KYOCERA AVX and can be downloaded for free from KYOCERA AVX website: <http://www.kyocera-avx.com/download/software/SpiCalci-AVX.zip>.

Figure 4

**Effects of Mechanical Stress** – High "K" dielectric ceramic capacitors exhibit some low level piezoelectric reactions under mechanical stress. As a general statement, the piezoelectric output is higher, the higher the dielectric constant of the ceramic. It is desirable to investigate this effect before using high "K" dielectrics as coupling capacitors in extremely low level applications.

**Reliability** – Historically ceramic capacitors have been one of the most reliable types of capacitors in use today. The approximate formula for the reliability of a ceramic capacitor is:

$$\frac{L_o}{L_t} = \left( \frac{V_t}{V_o} \right) \times \left( \frac{T_t}{T_o} \right)^Y$$

where

$L_o$  = operating life

$T_t$  = test temperature and

$L_t$  = test life

$T_o$  = operating temperature in °C

$V_t$  = test voltage

$X, Y$  = see text

$V_o$  = operating voltage

Historically for ceramic capacitors exponent X has been considered as 3. The exponent Y for temperature effects typically tends to run about 8.

# MLC Chip Capacitors

## General Description

A capacitor is a component which is capable of storing electrical energy. It consists of two conductive plates (electrodes) separated by insulating material which is called the dielectric. A typical formula for determining capacitance is:

**C** = capacitance (picofarads)

$$C = \frac{.224}{t} KA$$

**K** = dielectric constant (Vacuum = 1)

**A** = area in square inches

**t** = separation between the plates in inches  
(thickness of dielectric)

.224 = conversion constant  
(.0884 for metric system in cm)

**Capacitance** – The standard unit of capacitance is the farad. A capacitor has a capacitance of 1 farad when 1 coulomb charges it to 1 volt. One farad is a very large unit and most capacitors have values in the micro ( $10^{-6}$ ), nano ( $10^{-9}$ ) or pico ( $10^{-12}$ ) farad level.

**Dielectric Constant** – In the formula for capacitance given above the dielectric constant of a vacuum is arbitrarily chosen as the number 1. Dielectric constants of other materials are then compared to the dielectric constant of a vacuum.

**Dielectric Thickness** – Capacitance is indirectly proportional to the separation between electrodes. Lower voltage requirements mean thinner dielectrics and greater capacitance per volume.

**Area** – Capacitance is directly proportional to the area of the electrodes. Since the other variables in the equation are usually set by the performance desired, area is the easiest parameter to modify to obtain a specific capacitance within a material group.

**Energy Stored** – The energy which can be stored in a capacitor is given by the formula:

**E** = energy in joules (watts-sec)

**V** = applied voltage

**C** = capacitance in farads

**Potential Change** – A capacitor is a reactive component which

$$E = \frac{1}{2}CV^2$$

reacts against a change in potential across it. This is shown by the equation for the linear charge of a capacitor:

where

**I** = Current

**C** = Capacitance

**dV/dt** = Slope of voltage transition across capacitor

$$I_{ideal} = C \frac{dV}{dt}$$

Thus an infinite current would be required to instantly change the potential across a capacitor. The amount of current a capacitor can "sink" is determined by the above equation.

**Equivalent Circuit** – A capacitor, as a practical device, exhibits not only capacitance but also resistance and inductance. A simplified schematic for the equivalent circuit is:

**C** = Capacitance

**R<sub>s</sub>** = Series Resistance

**L** = Inductance

**R<sub>p</sub>** = Parallel Resistance

**Reactance** – Since the insulation resistance (Rp) is normally very high, the total impedance of a capacitor is:

$$Z = \sqrt{R_s^2 + (X_C - X_L)^2}$$

where

**Z** = Total Impedance

**R<sub>s</sub>** = Series Resistance

$$X_C = \text{Capacitive Reactance} = \frac{1}{2\pi fC}$$

$$X_L = \text{Inductive Reactance} = 2\pi fL$$

The variation of a capacitor's impedance with frequency determines its effectiveness in many applications.

**Phase Angle** – Power Factor and Dissipation Factor are often confused since they are both measures of the loss in a capacitor under AC application and are often almost identical in value. In a "perfect" capacitor the current in the capacitor will lead the voltage by 90°.

In practice the current leads the voltage by some other phase angle due to the series resistance RS. The complement of this angle is called the loss angle and:

Power Factor (P.F.) = Cos  $\phi$  or Sine  $\delta$

Dissipation Factor (D.F.) = tan  $\delta$

for small values of  $\delta$  the tan and sine are essentially equal which has led to the common interchangeability of the two terms in the industry.

# MLC Chip Capacitors

## General Description

**Equivalent Series Resistance** – The term E.S.R. or Equivalent Series Resistance combines all losses both series and parallel in a capacitor at a given frequency so that the equivalent circuit is reduced to a simple R-C series connection.

**Dissipation Factor** – The DF/PF of a capacitor tells what percent of the apparent power input will turn to heat in the capacitor.

$$\text{Dissipation Factor} = \frac{\text{E.S.R.}}{X_c} = (2 \pi f C) (\text{E.S.R.})$$

The watts loss are:

$$\text{Watts loss} = (2 \pi f C V^2) (\text{D.F.})$$

Very low values of dissipation factor are expressed as their reciprocal for convenience. These are called the "Q" or Quality factor of capacitors.

**Parasitic Inductance** – The parasitic inductance of capacitors is becoming more and more important in the decoupling of today's high speed digital systems. The relationship between the inductance and the ripple voltage induced on the DC voltage line can be seen from the simple inductance equation:

$$V = L \frac{di}{dt}$$

The  $\frac{di}{dt}$  seen in current microprocessors can be as high as 0.3 A/ns, and up to 10A/ns. At 0.3 A/ns, 100pH of parasitic inductance can cause a voltage spike of 30mV. While this does not sound very drastic, with the Vcc for microprocessors decreasing at the current rate, this can be a fairly large percentage.

Another important, often overlooked, reason for knowing the parasitic inductance is the calculation of the resonant frequency. This can be important for high frequency, by-pass capacitors, as the resonant point will give the most signal attenuation. The resonant frequency  $f_{res}$  is calculated from the simple equation:

$$2\pi\sqrt{LC}$$

**Insulation Resistance** – Insulation Resistance is the resistance measured across the terminals of a capacitor and consists principally of the parallel resistance RP shown in the equivalent circuit. As capacitance values and hence the area of dielectric increases, the I.R. decreases and hence the product (C x IR or RC) is often specified in ohm farads or more commonly megohm-microfarads. Leakage current is determined by dividing the rated voltage by IR (Ohm's Law).

**Dielectric Strength** – Dielectric Strength is an expression of the ability of a material to withstand an electrical stress. Although dielectric strength is ordinarily expressed in volts, it is actually dependent on the thickness of the dielectric and thus is also more generically a function of volts/mil.

**Dielectric Absorption** – A capacitor does not discharge instantaneously upon application of a short circuit, but drains gradually after the capacitance proper has been discharged. It is common practice to measure the dielectric absorption by determining the "reappearing voltage" which appears across a capacitor at some point in time after it has been fully discharged under short circuit conditions.

**Corona** – Corona is the ionization of air or other vapors which causes them to conduct current. It is especially prevalent in high voltage units but can occur with low voltages as well where high voltage gradients occur. The energy discharged degrades the performance of the capacitor and can in time cause catastrophic failures.

# MLC Chip Capacitors

## Surface Mounting Guide

### REFLOW SOLDERING

Case Size	D1	D2	D3	D4	D5
0805 (LD05)	3.00 (0.120)	1.00 (0.040)	1.00 (0.040)	1.00 (0.040)	1.25 (0.050)

*3640 (LD40)	10.67 (0.427)	1.52 (0.060)	7.62 (0.300)	1.52 (0.060)	10.16 (0.400)
*HQCE	10.67 (0.427)	1.52 (0.060)	7.62 (0.300)	1.52 (0.060)	10.16 (0.400)

\*KYOCERA AVX recommends reflow soldering only.

### Component Pad Design

Component pads should be designed to achieve good solder fillets and minimize component movement during reflow soldering. Pad designs are given below for the most common sizes of multilayer ceramic capacitors for both wave and reflow soldering. The basis of these designs is:

- Pad width equal to component width. It is permissible to decrease this to as low as 85% of component width but it is not advisable to go below this.
- Pad overlap 0.5mm beneath component.
- Pad extension 0.5mm beyond components for reflow and 1.0mm for wave soldering.

### WAVE SOLDERING

Case Size	D1	D2	D3	D4	D5
0805	4.00 (0.15)	1.50 (0.06)	1.00 (0.04)	1.50 (0.06)	1.25 (0.05)
1206	5.00 (0.19)	1.50 (0.06)	2.00 (0.09)	1.50 (0.06)	1.60 (0.06)

### Component Spacing

For wave soldering components, must be spaced sufficiently far apart to avoid bridging or shadowing (inability of solder to penetrate properly into small spaces). This is less important for reflow soldering but sufficient space must be allowed to enable rework should it be required.

this differential should not exceed 100°C.

For further specific application or process advice, please consult KYOCERA AVX.

### Cleaning

Care should be taken to ensure that the capacitors are thoroughly cleaned of flux residues especially the space beneath the capacitor. Such residues may otherwise become conductive and effectively offer a low resistance bypass to the capacitor.

Ultrasonic cleaning is permissible, the recommended conditions being 8 Watts/litre at 20-45 kHz, with a process cycle of 2 minutes vapor rinse, 2 minutes immersion in the ultrasonic solvent bath and finally 2 minutes vapor rinse.

### Preheat & Soldering

The rate of preheat should not exceed 4°C/second to prevent thermal shock. A better maximum figure is about 2°C/second.

For capacitors size 1206 and below, with a maximum thickness of 1.25mm, it is generally permissible to allow a temperature differential from preheat to soldering of 150°C. In all other cases

# MLC Chip Capacitors

## Surface Mounting Guide

### REFLOW SOLDER PROFILES

KYOCERA AVX RoHS compliant products utilize termination finishes (e.g.Sn or SnAg) that are compatible with all Pb-Free soldering systems and are fully reverse compatible with SnPb soldering systems. A recommended SnPb profile is shown for comparison; for Pb-Free soldering, IPC/JEDECJ-STD-020C may be referenced. The upper line in the chart shows the maximum envelope to which products are qualified (typically 3x reflow cycles at 260°C max). The center line gives the recommended profile for optimum wettability and soldering in Pb-Free Systems.

#### Preheat:

The pre-heat stabilizes the part and reduces the temperature differential prior to reflow. The initial ramp to 125°C may be rapid, but from that point (2-3)°C/sec is recommended to allow ceramic parts to heat uniformly and plastic encapsulated parts to stabilize through the glass transition temperature of the body (~ 180°C).

#### Reflow:

In the reflow phase, the maximum recommended time > 230°C is 40secs. Time at peak reflow is 10secs max.; optimum reflow is achieved at 250°C, (see wetting balance chart opposite) but products are qualified to 260°C max. Please reference individual product datasheets for maximum limits

#### Cool Down:

Cool down should not be forced and 6°C/sec is recommended. A slow cool down will result in a finer grain structure of the reflow solder in the solder fillet.

### WAVE SOLDER PROFILES

For wave solder, there is no change in the recommended wave profile; all standard Pb-Free (SnCu/SnCuAg) systems operate at the same 260°C max recommended for SnPb systems.

#### Preheat:

This is more important for wave solder; a higher temperature preheat will reduce the thermal shock to SMD parts that are immersed (please consult individual product data sheets for SMD parts that are suited to wave solder). SMD parts should ideally be heated from the bottom-Side prior to wave. PTH (Pin through hole) parts on the topside should not be separately heated.

#### Wave:

250°C – 260°C recommended for optimum solderability.

#### Cool Down:

As with reflow solder, cool down should not be forced and 6°C/sec is recommended. Any air knives at the end of the 2nd wave should be heated.

Wetting Force at 2nd Sec. (higher is better)

**IMPORTANT NOTE:** Typical Pb-Free reflow solders have a more dull and grainy appearance compared to traditional SnPb. Elevating the reflow temperature will not change this, but extending the cool down can help improve the visual appearance of the joint.

### Recommended Soldering Profiles

# MLC Chip Capacitors

## Surface Mounting Guide

### APPLICATION NOTES

#### Storage

Good solderability is maintained for at least twelve months, provided the components are stored in their "as received" packaging at less than 40°C and 70% RH.

#### Solderability

Terminations to be well soldered after immersion in a 60/40 tin/lead solder bath at  $235 \pm 5^\circ\text{C}$  for  $2 \pm 1$  seconds.

#### Leaching

Terminations will resist leaching for at least the immersion times and conditions shown below.

Termination Type	Solder Tin/Lead/Silver	Solder Temp. °C	Immersion Time Seconds
Nickel Barrier	60/40/0	$260 \pm 5$	$30 \pm 1$

### Recommended Soldering Profiles

### ad-Free Reflow Profile

### Wave

#### Lead-Free Wave Soldering

The recommended peak temperature for lead-free wave soldering is  $250^\circ\text{C}$ - $260^\circ\text{C}$  for 3-5 seconds. The other parameters of the profile remain the same as above.

The following should be noted by customers changing from lead based systems to the new lead free pastes.

- The visual standards used for evaluation of solder joints will need to be modified as lead free joints are not as bright as with tin-lead pastes and the fillet may not be as large.
- Resin color may darken slightly due to the increase in temperature required for the new pastes.
- Lead-free solder pastes do not allow the same self alignment as lead containing systems. Standard mounting pads are acceptable, but machine set up may need to be modified.

#### General

Surface mounting chip multilayer ceramic capacitors are designed for soldering to printed circuit boards or other substrates. The construction of the components is such that they will withstand the time/temperature profiles used in both wave and reflow soldering methods.

#### Handling

Chip multilayer ceramic capacitors should be handled with care to avoid damage or contamination from perspiration and skin oils. The use of tweezers or vacuum pick ups is strongly recommended for individual components. Bulk handling should ensure that abrasion and mechanical shock are minimized. Taped and reeled components provide the ideal medium for direct presentation to the placement machine. Any mechanical shock should be minimized during handling chip multilayer ceramic capacitors.

#### Preheat

It is important to avoid the possibility of thermal shock during soldering and carefully controlled preheat is therefore required. The rate of preheat should not exceed  $4^\circ\text{C}/\text{second}$  and a target figure  $2^\circ\text{C}/\text{second}$  is recommended. Although an  $80^\circ\text{C}$  to  $120^\circ\text{C}$  temperature differential is preferred, recent developments allow a temperature differential between the component surface and the

# MLC Chip Capacitors

## Surface Mounting Guide

soldering temperature of 150°C (Maximum) for capacitors of 1210 size and below with a maximum thickness of 1.25mm. The user is cautioned that the risk of thermal shock increases as chip size or temperature differential increases.

### Soldering

Mildly activated rosin fluxes are preferred. The minimum amount of solder to give a good joint should be used. Excessive solder can lead to damage from the stresses caused by the difference in coefficients of expansion between solder, chip and substrate. KYOCERA AVX terminations are suitable for all wave and reflow soldering systems. If hand soldering cannot be avoided, the preferred technique is the utilization of hot air soldering tools.

### Cooling

Natural cooling in air is preferred, as this minimizes stresses within the soldered joint. When forced air cooling is used, cooling rate should not exceed 4°C/second. Quenching is not recommended but if used, maximum temperature differentials should be observed according to the preheat conditions above.

### Cleaning

Flux residues may be hygroscopic or acidic and must be removed. KYOCERA AVX MLC capacitors are acceptable for use with all of the solvents described in the specifications MIL-STD-202 and EIA-RS-198. Alcohol based solvents are acceptable and properly controlled water cleaning systems are also acceptable. Many other solvents have been proven successful, and most solvents that are acceptable to other components on circuit assemblies are equally acceptable for use with ceramic capacitors.

## POST SOLDER HANDLING

Once SMP components are soldered to the board, any bending or flexure of the PCB applies stresses to the soldered joints of the components. For leaded devices, the stresses are absorbed by the compliancy of the metal leads and generally don't result in problems unless the stress is large enough to fracture the soldered connection.

Ceramic capacitors are more susceptible to such stress because they don't have compliant leads and are brittle in nature. The most frequent failure mode is low DC resistance or short circuit. The second failure mode is significant loss of capacitance due to severing of contact between sets of the internal electrodes.

Cracks caused by mechanical flexure are very easily identified and generally take one of the following two general forms:

Type A:  
Angled crack between bottom of device to top of solder joint.

Type B:  
Fracture from top of device to bottom of device.

Mechanical cracks are often hidden underneath the termination and are difficult to see externally. However, if one end termination falls off during the removal process from PCB, this is one indication that the cause of failure was excessive mechanical stress due to board warping.

# MLC Chip Capacitors

## Surface Mounting Guide

### COMMON CAUSES OF MECHANICAL CRACKING

The most common source for mechanical stress is board depanelization equipment, such as manual breakapart, v-cutters and shear presses. Improperly aligned or dull cutters may cause torqueing of the PCB resulting in flex stresses being transmitted to components near the board edge. Another common source of flexural stress is contact during parametric testing when test points are probed. If the PCB is allowed to flex during the test cycle, nearby ceramic capacitors may be broken.

A third common source is board to board connections at vertical connectors where cables or other PCBs are connected to the PCB. If the board is not supported during the plug/unplug cycle, it may flex and cause damage to nearby components.

Special care should also be taken when handling large (>6" on a side) PCBs since they more easily flex or warp than smaller boards.

Preferred Method - No Direct Part Contact

Poor Method - Direct Contact with Part

### PCB BOARD DESIGN

To avoid many of the handling problems, KYOCERA AVX recommends that MLCs be located at least .2" away from nearest edge of board. However when this is not possible, KYOCERA AVX recommends that the panel be routed along the cut line, adjacent to where the MLC is located.

No Stress Relief for MLCs

Routed Cut Line Relieves Stress on MLC

# MLC Chip Capacitors

## MIL-PRF-123/Chips

KYOCERA AVX's M123 series MIL-qualified ceramic capacitors are designed for high performance application in BX voltage temperature characteristics for general purpose dielectric and in BP voltage temperature characteristics for temperature stable dielectric. M123 series capacitors offer design and component engineers a proven technology for SMD processing and applications requiring space-level reliability. They are designed for use in timing circuits and critical frequency applications where absolute stability of capacitance is required (BP), as well as in applications where a wider capacitance variation with temperature and voltage can be tolerated (BX)

### HOW TO ORDER

**Military Type Designation: Capacitors, Fixed, Ceramic Dielectric, (Temperature Stable and General Purpose), High Reliability**

**Not RoHS Compliant**

# High Temperature MLCCs

## AT Series – 200°C & 250°C Rated

Present military specifications, as well as a majority of commercial applications, require a maximum operating temperature of 125°C. However, the emerging market for high temperature electronics demands capacitors operating reliably at temperatures beyond 125°C. KYOCERA AVX's high temperature chip capacitor product line, has been extended with the BME COG chip. All AT chips have verified capabilities of long term operation up to 250°C for applications in both military and commercial businesses. These capacitors demonstrate high volumetric efficiency, high insulation resistance and low ESR/ESL for the most demanding applications, such as "down-hole" oil exploration and aerospace programs.

### HOW TO ORDER

		<b>BME</b>						
		C0G 250°C = 5						
		C0G 200°C = 3						

### ELECTRICAL SPECIFICATIONS

#### Temperature Coefficient

PME C0G 0±30ppm/°C, -55C to 250°C  
BME C0G 0±30ppm/°C, -55C to 200°C

See TCC Plot for +250°C

VHT: T ±15%, -55°C to +150°C  
See TCC Plot for +250°C

#### Capacitance Test (MIL-STD-202, Method 305)

25°C, 1.0 ± 0.2 Vrms (open circuit voltage) @ 1kHz

#### Dissipation factor 25°C

C0G: 0.15% Max at 1.0 ± 0.2 Vrms (open circuit voltage) @ 1kHz  
VHT: 2.5% Max at 1.0 ± 0.2 Vrms (open circuit voltage) @ 1kHz

#### Insulation Resistance 25°C (MIL-STD-202, Method 302)

100GΩ or 1000MΩ·μF (whichever is less)

#### Insulation Resistance 125°C (MIL-STD-202, Method 302)

10GΩ or 100MΩ·μF (whichever is less)

#### Insulation Resistance 200°C (MIL-STD-202, Method 302)

1GΩ or 10MΩ·μF (whichever is less)

#### Insulation Resistance 250°C (MIL-STD-202, Method 302)

100MΩ or 1MΩ·μF (whichever is less)

#### Direct Withstanding Voltage 25°C (Flash Test)

250% rated voltage for 5 seconds with 50mA max charging current

# MLC Chip Capacitors

## High Voltage MLC Leaded Chips

### For 600V to 5000V Applications

#### HOW TO ORDER

1825	A	A	271	K	A	V	00N
KAVX Style	Voltage	Temperature Coefficient	Capacitance Code	Capacitance Tolerance	Test Level	Finish	Lead Style
1825	600V/630V = C	COG = A	(2 significant digits + no. of zeros)	COG:J = ±5%	A = Standard	V = Uncoated	00N = Straight Lead
2225	1000V = A	X7R = C	Examples:	K = ±10%		W = Epoxy Coated	00J = Leads Formed In
3640	1500V = S		10 pF = 100	M = ±20%			00L = Leads Formed Out
	2000V = G		100 pF = 101	X7R:K = ±10%			
	2500V = W		1,000 pF = 102	M = ±20%			
	3000V = H		22,000 pF = 223	Z = +80%, -20%			
	4000V = J		220,000 pF = 224				
	5000V = K						

Notes: Capacitors with X7R dielectrics are not intended for applications across AC supply mains or AC line filtering with polarity reversal. Contact plant for recommendations. Capacitors may require protective surface coating to prevent external arcing.

**Not RoHS Compliant**

**"N" STYLE LEADS**

**"J" STYLE LEADS**

**"L" STYLE LEADS**

#### DIMENSIONS

Style	A (max.)	B (max.)	millimeters (inches)			
			C ±.635 (±0.025)	D ±.635 (±0.025)	E (max.)	No. of Leads per side
1825	2.54 (0.100)	For "N" Style Leads, "B" Dimension = 4.19 (0.165) For "J" & "L" Leads, "B" Dimension = 4.58 (0.180)	5.08 (0.200)	6.35 (0.250)	6.86 (0.270)	3
2225			6.35 (0.250)	6.35 (0.250)	7.62 (0.300)	3
3640			10.2 (0.400)	10.2 (0.400)	11.2 (0.440)	4

Note: For W (Epoxy Coated) part add 0.127 (0.005) to max. and nominal dimensions A, B, D, & E

Performance of SMPS capacitors can be simulated by downloading SpiCalci software program -  
<http://www.kyocera-avx.com/download/software/SpiCalci-AVX.zip>  
 Custom values, ratings and configurations are also available.

The Important Information/Disclaimer is incorporated in the catalog where these specifications came from or available online at [www.kyocera-avx.com/disclaimer/](http://www.kyocera-avx.com/disclaimer/) by reference and should be reviewed in full before placing any order.

# MLC Chip Capacitors

## High Voltage MLC Leaded Chips

### For 600V to 5000V Applications

## COG Dielectric

### Performance Characteristics

Capacitance Range	10 pF to 0.047 µF (25°C, 1.0 ±0.2 Vrms at 1kHz, for ≤ 1000 pF use 1 MHz)
Capacitance Tolerances	±5%, ±10%, ±20%
Dissipation Factor	0.15% max. (+25°C, 1.0 ±0.2 Vrms, 1kHz, for ≤ 1000 pF use 1 MHz)
Operating Temperature Range	-55°C to +125°C
Temperature Characteristic	0 ±30 ppm/°C (0 VDC)
Voltage Ratings	600, 630, 1000, 1500, 2000, 2500, 3000, 4000 & 5000 VDC (+125°C)
Insulation Resistance (+25°C, at 500 VDC)	100K MΩ min. or 1000 MΩ - µF min., whichever is less
Insulation Resistance (+125°C, at 500 VDC)	10K MΩ min. or 100 MΩ - µF min., whichever is less
Dielectric Strength	Minimum 120% rated voltage for 5 seconds at 50 mA max. current

# MLC Chip Capacitors

## Tip & Ring Chips

KYOCERA AVX "Tip & Ring" or "ring detector" Multilayer Ceramic Chip Capacitors are designed as a standard telecom filter to block -48 Volts DC telephone line voltage and pass subscriber's AC signal pulse (16 to 25Hz, 70 to 90Vrms). The typical ringing signal is seen on figure on page 132. The ringer capacitors replace large leaded film capacitors and are ideal for telecom/modem applications. Using KYOCERA AVX "Tip & Ring" capacitors not only saves valuable real estate on the board and reduces the weight of overall product, but also features standard surface mounting capabilities, so critical to new and compact designs.

The KYOCERA AVX "Tip & Ring" capacitors are offered in standard EIA sizes and standard values. They offer excellent high frequency performance, low ESR and improved temperature performance over film capacitors.

## Tip & Ring Tin/Lead Termination "B"

KYOCERA AVX will support customers for commercial and military Multilayer Ceramic Capacitors with a termination consisting of 5% minimum lead. This termination is indicated by the use of a "B" in the 12th position of the KYOCERA AVX Catalog Part Number. This fulfills KYOCERA AVX's commitment to providing a full range of products to our customers. KYOCERA AVX has provided in the following pages, a full range of values that we are offering in this "B" termination.

KYOCERA AVX "Tip & Ring" or "ring detector" Multilayer Ceramic Chip Capacitors are designed as a standard telecom filter to block -48 Volts DC telephone line voltage and pass subscriber's AC signal pulse (16 to 25Hz, 70 to 90 VRMS). The typical ringing signal is seen on figure on page 134. The ringer capacitors replace large leaded film capacitors and are ideal for telecom/modem applications. Using KYOCERA AVX "Tip and Ring" capacitors not only saves valuable real estate on the board and reduces the weight of the overall product, but also features standard surface mounting capabilities, so critical to new and compact designs.

The KYOCERA AVX "Tip & Ring" capacitors are offered in standard EIA sizes and standard values. They offer excellent high frequency performance, low ESR and improved temperature performance over film capacitors.

#### NOTES:

- The cavity defined by A<sub>0</sub>, B<sub>0</sub>, and K<sub>0</sub> shall be configured to provide the following: Surround the component with sufficient clearance such that:
  - the component does not protrude beyond the sealing plane of the cover tape.
  - the component can be removed from the cavity in a vertical direction without mechanical restriction, after the cover tape has been removed.
  - rotation of the component is limited to 20° maximum (see Sketches D & E).
  - lateral movement of the component is restricted to 0.5mm maximum (see Sketch F).
- Tape with or without components shall pass around radius "R" without damage.
- Bar code labeling (if required) shall be on the side of the reel opposite the round sprocket holes. Refer to EIA-556.
- B<sub>1</sub> dimension is a reference dimension for tape feeder clearance only.
- If P<sub>1</sub> = 2.0mm, the tape may not properly index in all tape feeders.

# Surface Mount CapGuard™

## Varistor/Capacitor Combination for EMI/Surge Suppression

KYOCERA AVX's surface mount CapGuard™ products are designed to provide both transient voltage protection and EMI/RFI suppression for electronic circuits. CapGuards™ are ideally suited to filter out EMI/RFI noise generated by switch mode power supplies or motors on DC lines or I/O lines in electronic circuits. With multilayer varistor (MLV) utilized in CapGuard™ product, effective transient voltage protection is achieved to protect sensitive electronics from high voltage transients. The capacitor, on the other hand, absorbs high frequency noise on the line. The MLCC capacitors are designed with temperature stable X7R dielectric, allowing for wide temperature use with good capacitance stability. The surface mount CapGuards™ are characterized with a very small form factor to minimize board space. The parts are assembled using high melting point solder (268°C solidus / 290°C liquidus) allowing for standard reflow processing during board level assembly without a risk of reflowing HMP solder.

### FEATURES

- High Capacitance / EMI Filtering
- Bi-Directional Protection
- Fast Turn-On Time
- Multiple Strike Capability
- HMP Solder Termination
- 1210 EIA Case Size

### TARGET APPLICATIONS

- Avionics
- Military
- I/O port protection
- EMI filtering with surge protection

### GENERAL CHARACTERISTICS

Storage Temperature: -55°C to +125°C  
 Operating Temperature: -55°C to +125°C

### TECHNICAL INFORMATION

For more technical information on surface mount CapGuard™  
 please visit the Transient Suppression catalog page 96.

# Filtered Arrays XD Type

## FEATURES

- To be used beneath a connector
- Provide an EMI filtered signal line between electronic modules
- Effective insertion loss from 1MHz up to ~1GHz
- Surface mount compatible

# Baseline Management

## A Dedicated Facility / BS9100 Requirements

### Baseline Products – A Selection of Options

As a matter of course, KYOCERA AVX maintains a level of quality control that is sufficient to guarantee whatever reliability specifications are needed. However, KYOCERA AVX goes further. There are over 65 quality control and inspection operations that are available as options to a customer. Any number may be requested and written into a baseline process. The abbreviated list that follows indicates the breadth and thoroughness of available Q.C. services at KYOCERA AVX:

- Ultrasonic Scanning
- Destructive Physical Analysis (DPA)
- X-Ray
- Bondability Testing
- Sorting and Matching to Specification Limits
- Temperature and Immersion
- Cycling
- Load/Humidity Life Testing
- Dye Penetration Evaluation
- 100% Ceramic Sheet Inspection
- Voltage Conditioning
- Termination Pull Testing
- Pre-encapsulation Inspection

Within the "specials" area, KYOCERA AVX accommodates a broad variety of customer needs. The KYOCERA AVX facilities are capable of developing and producing the most reliable and advanced MLCs available anywhere in the world today. Yet it is equally adept at making volume "custom" components that may differ only in markings or lead placement from the standard catalog part.

### Stretching the Limits

KYOCERA AVX Advanced Products are developed to meet the extraordinary needs of specific applications. Requirements may include: low ESR, low ESL, voltages up to 10's of thousands, advanced decoupling designs for frequencies up to 10's of megahertz, temperatures up to 200°C, extremely high current discharge, ability to perform in high radiation or toxic atmospheres, or minimizing piezoelectric effect in high vibration environments.

In addition, solving customer packaging problems, aside from addressing circuit problems, is available. Special lead frames for high current or special mounting requirements are examples. Multiple ceramic chip package designs per customer requirements are also available.

KYOCERA AVX Advanced Products always begin with a joint development program involving KYOCERA AVX and the customer. In undersea cable components, for example, capacitance and impedance ratings had to be maintained within 1% over the multi-year life of the system. In this case, KYOCERA AVX Advanced Products not only met the parametric requirements of the customer, but accelerated life testing of 3,500 units indicated an average life expectancy of over 100,000 years.

### Baseline Program Management

Baseline Program Management has been KYOCERA AVX's forte over the years. This is both a product and a service function designed to provide the customer the full capabilities of KYOCERA AVX in meeting their program requirements. KYOCERA AVX has had Baseline and Program Management in the following major systems:

- AT&T Undersea Cable
- Minuteman
- Peacekeeper
- STC Undersea Cable
- CIT Undersea Cable
- Raytheon-Hawk Missile
- Trident
- Small Missile Program
- Northrop - Peacekeeper
- Sparrow Program
- Space Station
- European Space Agency (ESA)
- Commercial Satellite Program
- Ariane 4 & 5
- EuroFighter (Typhoon)
- EH101 (Merlin)

KYOCERA AVX technical personnel stand ready to answer any questions and provide any information required on your programs from the most exotic Hi-Rel part to the simplest variation on a standard. Put the experience, technology and facilities of the leading company in multilayer ceramics to work for you. No other source offers the unique combination of capability and commitment to advanced application specific components.

## PROCUREMENT OF COMPONENTS OF BS9100 (CH/CV RANGE 50-500V)

The manufacturing facilities have ISO9001 approval. Customers requiring BS9100 approved components are requested to follow these steps:

1. The customer shall submit a specification for the required components to KYOCERA AVX for approval. Once agreed a Customer Detail Specification (CDS) number will be allocated by KYOCERA AVX to this specification. This number with its current revision must be quoted at the time of order placement.
2. If the customer has no specification, then

KYOCERA AVX will supply a copy of the standard CDS for the customer's approval and signature. As in 1 above, when agreed this CDS number must be quoted at order entry. In the event of agreement not being reached the component cannot be supplied to BS9100.

## PACKAGING

Unless otherwise stated in the appropriate data sheet parts are supplied in a waffle pack.

## Examples of Special Packaging and Custom Lead Configurations from KYOCERA AVX Advanced Products

### Custom Lead Configurations . . .

optimum 3D packaging, high current applications and high reliability stress relief mounting.

### Custom Packaging . . .

eliminate reliability concerns with multiple component assembly.

Many other innovations are available from KYOCERA AVX Advanced Products. Let them apply these ideas to your application specific programs.
