

Product Obsolescence Memo

MULTIFUSE® PPTC RESETTABLE FUSES

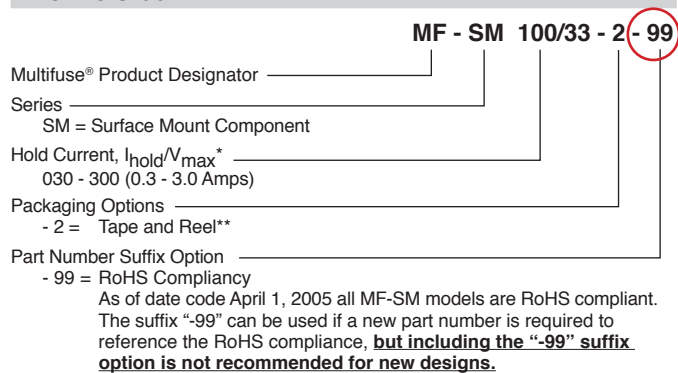

June 6, 2018

Select Multifuse® Products with Part Number Suffix -99 to be Discontinued

To streamline the part numbering system for select Bourns® Multifuse® product series, part numbers that include the “-99” suffix option will be phased out over the next 18 months with a last time order date of September 30th, 2019 and a last time ship date of December 31st, 2019. Customers using Bourns® Multifuse® part numbers with the “-99” suffix option are encouraged to begin transitioning to the standard part number without the “-99” suffix as listed in Table 1. See the “How to Order” example below for reference to the “-99” suffix option.

How to Order

* V_{max} entry applies only to models MF-SM075/60, MF-SM100/33, MF-SM150/33 & MF-SM185/33.

** Packaged per EIA-481-2

The following three Bourns® Multifuse® product series are impacted by this planned obsolescence:

- [MF-R Series](#)
- [MF-RX Series](#)
- [MF-SM Series](#)

The “-99” suffix option was originally introduced by the Bourns Multifuse Product Line to identify RoHS compliant products from non-RoHS compliant products. As of date code April 1, 2005, all Bourns® Multifuse® MF-R, MF-RX, and MF-SM models are RoHS compliant*. Products with and without the “-99” suffix are all RoHS compliant*, halogen free** and are the exact same product produced in the same factory and on the

same production lines. There are no differences in form, fit, function, quality, or reliability. Table 1 lists the “-99” part numbers that will be phased out and the recommended alternative standard part numbers. Bourns will continue to warrant “-99” suffix part numbers purchased from authorized Bourns sources in accordance with its applicable terms and conditions of sale.

* RoHS Directive 2002/95/EC Jan. 27, 2003 including annex and RoHS Recast 2011/65/EU June 8, 2011.

** Bourns considers a product to be “halogen free” if (a) the Bromine (Br) content is 900 ppm or less; (b) the Chlorine (Cl) content is 900 ppm or less; and (c) the total Bromine (Br) and Chlorine (Cl) content is 1500 ppm or less.
