

BAT15-04R

Reverse series silicon RF Schottky diode pair

Product description

These Infineon RF Schottky diodes are silicon low barrier N-type devices with an integrated guard ring on-chip for over-voltage protection. Their low barrier height, low forward voltage and low junction capacitance make BAT15-04R a suitable choice for mixer and detector functions in applications which frequencies are as high as 12 GHz.

Feature list

- Low inductance $L_S = 1.5$ nH (typical)
- Low capacitance $C = 0.27$ pF (typical) at 1 MHz
- Industry standard SOT23-3 package (2.9 mm x 2.4 mm x 1 mm)
- Pb-free, RoHS compliant

Product validation

Qualified for industrial applications according to the relevant tests of JEDEC47/20/22.

Potential applications

For mixers and detectors in:

- Satellite systems
- Low noise blocks for Ku bands
- Security systems

1 Absolute maximum ratings

Table 2 Absolute maximum ratings at $T_A = 25\text{ °C}$, unless otherwise specified

Parameter	Symbol	Values		Unit	Note or test condition
		Min.	Max.		
Diode reverse voltage	V_R	-	4	V	
Forward current	I_F	-	110	mA	
Total power dissipation	P_{TOT}	-	100	mW	$T_S \leq 77\text{ °C}$ ¹⁾
Junction temperature	T_J	-	150	°C	
Operating temperature	T_{OP}	-55	150		
Storage temperature	T_{STG}	-55	150		

Attention: Stresses above the maximum values listed here may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Exceeding only one of these values may cause irreversible damage to the component.

¹ T_S is the soldering point temperature.
