

RO3112E

433.42 MHz SAW Resonator

**SM3030-6 Case
3.0 X 3.0**

- **Designed for European 433.42 MHz Remote Control and Security Transmitters**
- **Very Low Series Resistance**
- **Quartz Stability**
- **Complies with Directive 2002/95/EC (RoHS)**

The RO3112E is a true one-port, surface-acoustic-wave (SAW) resonator in a surface-mount ceramic case. It provides reliable, fundamental-mode, quartz frequency stabilization of fixed-frequency transmitters operating at 433.42 MHz. This SAW is designed specifically for remote control and wireless security transmitters operating in Europe under ETSI I-ETS 300 220.

Absolute Maximum Ratings

Rating	Value	Units
Input Power Level	0	dBm
DC Voltage	12	VDC
Storage Temperature Range	-40 to +85	°C
Operating Temperature Range	-40 to +85	°C
Soldering Temperature (10 seconds / 5 cycles maximum)	260	°C

Electrical Characteristics

Characteristic		Sym	Notes	Minimum	Typical	Maximum	Units			
Center Frequency, +25 °C	Absolute Frequency	f_C	2,3,4,5	433.345		433.495	MHz			
	Tolerance from 433.42 MHz	Δf_C							± 75	kHz
Insertion Loss		IL	2,5,6		1.2	2.5	dB			
Quality Factor	Unloaded Q	Q_U	5,6,7		8400					
	50 Ω Loaded Q	Q_L							1000	
Temperature Stability	Turnover Temperature	T_O	6,7,8	10	25	35	°C			
	Turnover Frequency	f_O							f_C	
	Frequency Temperature Coefficient	FTC							0.032	ppm/°C ²
Frequency Aging	Absolute Value during the First Year	$ f_A $	1		≤ 10		ppm/yr			
DC Insulation Resistance between Any Two Terminals			5	1.0			M Ω			
RF Equivalent RLC Model	Motional Resistance	R_M	5, 7, 9		14.0		Ω			
	Motional Inductance	L_M							43.4	μH
	Motional Capacitance	C_M							3.3	fF
	Shunt Static Capacitance	C_O						5, 6, 9	3.7	pF
Test Fixture Shunt Inductance		L_{TEST}	2, 7		36.5		nH			
Lid Symbolization (in addition to Lot and/or Date Codes)					684 // YWWS					
Standard Reel Quantity	Reel Size 7 Inch		10	500 Pieces/Reel						
	Reel Size 13 Inch			3000 Pieces/Reel						

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling.

NOTES:

- Frequency aging is the change in f_C with time and is specified at +65 °C or less. Aging may exceed the specification for prolonged temperatures above +65 °C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- The center frequency, f_C , is measured at the minimum insertion loss point, IL_{MIN} , with the resonator in the 50 Ω test system ($VSWR \leq 1.2:1$). The shunt inductance, L_{TEST} , is tuned for parallel resonance with C_O at f_C . Typically, $f_{OSCILLATOR}$ or $f_{TRANSMITTER}$ is approximately equal to the resonator f_C .
- One or more of the following United States patents apply: 4,454,488 and 4,616,197.
- Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
- Unless noted otherwise, case temperature $T_C = +25 \pm 2$ °C.
- The design, manufacturing process, and specifications of this device are subject to change without notice.
- Derived mathematically from one or more of the following directly measured parameters: f_C , IL, 3 dB bandwidth, f_C versus T_C , and C_O .
- Turnover temperature, T_O , is the temperature of maximum (or turnover) frequency, f_O . The nominal frequency at any case temperature, T_C , may be calculated from: $f = f_O [1 - FTC (T_O - T_C)^2]$. Typically *oscillator* T_O is approximately equal to the specified *resonator* T_O .
- This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance C_O is the static (nonmotional) capacitance between the two terminals measured at low frequency (10 MHz) with a capacitance meter. The measurement includes parasitic capacitance with "NC" pads unconnected. Case parasitic capacitance is approximately 0.05 pF. Transducer parallel capacitance can be calculated as: $C_P \approx C_O - 0.05$ pF.
- Tape and Reel Standard Per ANSI / EIA 481.

Electrical Connections

The SAW resonator is bidirectional and may be installed with either orientation. The two terminals are interchangeable and unnumbered. The callout NC indicates no internal connection. The NC pads assist with mechanical positioning and stability. External grounding of the NC pads is recommended to help reduce parasitic capacitance in the circuit.

Pin	Connection
1	NC
2	Terminal
3	NC
4	NC
5	Terminal
6	NC

Equivalent RLC Model

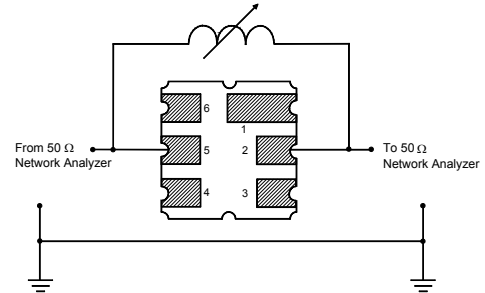

Temperature Characteristics

The curve shown accounts for resonator contribution only and does not include external LC component temperature effects.

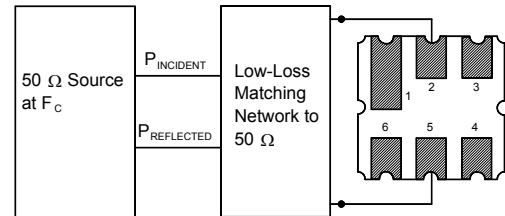

Characterization Test Circuit

Inductor L_{TEST} is tuned to resonate with the static capacitance, C_0 , at F_c .

Power Dissipation Test
